Our Story

The MazWell Group® – Our Journey

Every company's story is constantly changing. We see the next chapter of our history being written with the ownership of The Dodge® Company Ltd (Dodge® UK) passing from the Dodge® UK family to The MazWell® Group, founded by Craig Caldwell and Robert Mazza. Whilst the ownership of Dodge® UK has changed as well as the name, the Quality and Service that everyone has come to know and expect from Dodge® UK continues. Under the stewardship of The MazWell® Group we will continue to maintain and build upon the foundation on which our company was built.

From Humble Beginnings....

The Dodge® Chemical Company began in The United States of America when A Johnson Dodge® started the company in 1893. From that day to the present, the Dodge® brand and reputation has grown to become one of the most widely known names and industry leaders in the Funeral Service Profession. Our profession of Funeral Directing and Embalming has seen a great many changes over the last 100 or more years. Dodge® has proudly responded to these changes; including the formulation, testing and release of the world's first formaldehyde free arterial and cavity chemicals, the first embalming machine with automatic pressure control and a waterless aspirator.

Arnold and Mike Dodge, the third generation of the Dodge family, recognized that a deep and meaningful understanding of the value of funeral service would be a key to our success. Its just one of the reasons Dodge® company representatives are professionally qualified in all aspects of embalming and funeral service. To further promote the importance of professional education the Dodge® Sunshine Seminars were developed to share enhancements in our profession.

Debbie and Kristie Dodge are the fourth generation of family to run the business continuing the tradition of quality and service that the Dodge® Company was founded on.

To Now....

Our Dodge® UK story began ninety years later in 1983 in a small warehouse located in Whitchurch, Hampshire. We have since grown from a small 2-person single shop to a company of 3 buildings and 18 team members. With divisions in Australia and Germany, as well as 18 international distributors, we have become recognized as the leader in the field of manufacture and supply of quality embalming chemicals, equipment and supplies throughout Europe as well as globally.

And Looking Forward...

It is our everyday challenge and privilege to support the ever-changing needs and expectations of our customers as you care for the bereaved families, friends and deceased loved ones in your communities. This is no easy task and everyone at The MazWell® Group understands the magnitude and importance of this responsibility.

MazWell® cherishes the values of the Dodge family that have brought us to this point. It is now that our stewardship of the name and reputation continues moving forward. Our dedication to promoting the value of our profession and funeral service will always be paramount. Through continuing education, introduction of new products and innovations, and bringing better and safer chemicals to the preparation room, MazWell® will continue earning your trust.

The relationships and friendships built with our customers are based on honesty, credibility and our utmost desire to serve you today and always. As a team we look forward to ensuring that we "Help you, so you can help others" every day!

The MazWell Group®
Helping you, so you can help others

Placing Orders & T&C's

When placing a phone, fax or email order

For the most efficient ordering process we suggest the following tips:

1) Please write a list of what you want:

Even if you plan to call us, this will save you time and ensure that you get everything you need.

2) On your list write down:

- A) Each item's 6 digit catalogue number.
- B) The quantity you want.
- C) The description (this is helpful because we have so many similar products). If you do not have the catalogue number a good description will help us find the right products.

3) Please give us your account number:

It's recommended that you write this on your catalogue. Alternatively, you can find this on any MazWell® invoice. Please keep a record to simplify ordering in the future.

4) Non-stock items take longer:

There are some items in our catalogue that come from other manufacturers over seas. When placing an order we will advise you of any delays and endeavour to supply your requirements as soon as possible. Some items can take up to 6 weeks for delivery.

Phone: +44 (0)1256 893 883
Email: enquiries@themazwellgroup.com
Website: www.themazwellgroup.com

Please note that some items and packaging may vary slightly from the descriptions of this catalogue.

Please check the number of boxes received with the number of boxes shipped before signing for the delivery. Note the discrepancy on the driver's papers and call The MazWell® Group as soon as possible.

Short Shipments

Before signing for any delivery, please make sure that you count the number of boxes, or cartons being delivered. If there is a discrepancy, indicate it on the delivery driver's copy and initial before signing. This will allow MazWell® to make a claim for the missing items. This notification on the drivers paperwork needs to be made to receive the replacement goods without charge.

Returns Policy & Procedure

We realise that every now and then, you may place an order for a particular item and when it arrives, it is not what you wanted or has been damaged in shipping. We want to be as helpful as possible when this happens. In order to expedite the return process, please call our office to authorise a return then your account will be noted and any problems alleviated.

Visual Damage

Check the outside of the shipping boxes before signing for them. If there is damage to a box, refuse the order and have the delivery company return the order. Please call the office to arrange for a replacement order. If you do keep the order, please keep the box as most shippers will need to see the packaging for claim purposes.

Concealed Damage

If there is no visible damage to the box, but when you open it, the item is damaged, contact the office immediately. We cannot accept concealed damage claims after 3 days from your signed delivery. We will contact the delivery company and start a claim process to determine when and how the damages occurred. Once determined, a call tag will be sent to return the item and a replacement will be sent.

Please remember that if your claim is made after 3 days from delivery, our shipping agents may refuse responsibility and a credit may not be extended. Please keep the box as most carriers will need to see the packaging for claim purposes.

Missing Items

Occasionally an item that you ordered may not be in the box. Please contact the office within 48 hours of your signed delivery. In this situation, we will investigate the short shipment and if required we will ship a replacement to you with no added carriage charge.

Items Being Returned

Please call the office to work out arrangements for all returns. Products must be returned in good, unused condition, preferably in the original packaging.

For items from outside manufacture, PLEASE notify us within 48 hours of receipt of the item to arrange for Return Call Tags (item will be returned to manufacturer pending approval from that manufacturer) Credit will not be issued until the item is received by the manufacture.

For returns other than for defects, damages or shipping errors, restocking fees (which range from 10-25%) and shipping fees will be deducted from your refund/ credit.

ARTERIAL CHEMICALS

Formaldehyde Free

Freedom Art

The Freedom Art process will not yield the same degree of firmness you would normally expect with traditional arterial chemicals. For optimum results, the following guidelines are recommended minimums.

Instructions For Use:

For a case weighing up to 200 lb or 90 kg:

- 2.83 litres of Freedom Art
- 1.5 litres of Metaflow
- 0.5 litres of Rectifiant
- Enough water to make 8 litres of solution

Should you require additional fluid for embalming larger cases, the quantities can be halved and used to make 4 litres of arterial solution for additional injection procedures.

For difficult or challenging bodies, it is recommended that a stronger solution be used by reducing the water content of the solution and increasing the quantity of Freedom Art, Metaflow and Rectifiant. The best results have been achieved with the use of a drain tube and intermittent drainage although Freedom Art can be used with any injection technique. Following the arterial injection and aspiration, the cavities should be treated with 1 litre of Freedom Cav distributed equally between the thoracic and abdominal cavities. Any less fluid may lead to embalming failure.

Product	SKU	Size	Qty
Freedom Art Kit	241810	2.83 litre Freedom Art	1
		1 litre Rectifiant	1
		1 litre Freedom Cav	1
		1 litre Metaflow	2
Freedom Art	241811	2.83 litre	4

Intro 5

Intro 5 has all the characteristics of Introfiant but is a low fuming, low index fluid. Provides dependable results in the most challenging of cases, whilst reducing the operators exposure to formaldehyde and improving working conditions in the embalming room.

SKU	Size	Qty	Index
105013	1 litre	12	5

Metasyn 5

Like it's higher index siblings, Metasyn 5 features Dodge® Plasdoform chemistry, which controls the release of formaldehyde, allowing for thorough and complete distribution into the tissues. With its subtle dyes, Metasyn 5 will give even, non-spotting and natural colouration to lifeless tissues, reducing the time required for cosmetic application. In most cases only the lightest application of translucent cosmetics is all that will be required. Cases embalmed will remain soft and pliable, giving a more pleasing experience to the bereaved when visiting the deceased.

SKU	Size	Qty	Index
122012	1 litre	12	5

Plasdo 5

Plasdo-5 offers the embalmer an effective humectant based arterial chemical with a low formaldehyde content resulting in less firming and yet a high level of disinfection. Plasdo-5 is an opaque, non-fatty, non-emulsified chemical and will impart a natural translucence to the skin and dispel putty grey colourations post embalming must for the embalmer seeking a versatile, safe and trouble free low level arterial embalming chemical.

SKU	Size	Qty	Index
107027	1 litre	12	5

Chroma Pink 5

Chroma Pink 5 offers the embalmer an effective arterial chemical with a low formaldehyde content. With less firming, yet a high level of disinfection and a pleasantly appearing cosmetic finish, this will become a favourite for the safety conscious embalmer who demands the highest standards day after day, week after week.

SKU	Size	Qty	Index
109025	1 litre	12	5

Introfiant

Introfiant, identifiable by its distinctive deep tone Dynachrome colouring, is an ultra-potent arterial embalming medium intensified by the addition of powerful Dodge 'Introfiers' for penetrating and preserving circulation - resistant bodies. Although initially formulated to cope with 'problem case' conditions, this arterial has found widespread favour as a general - purpose embalming medium because its excess strength relieves the embalmer of all doubts concerning the efficacy of the arterial injection - regardless of vascular and tissue conditions. Many leading establishments consider Introfiant an invaluable time-saver and specify its use on extreme and normal cases alike.

Performance Highlights:

- Reduces yellow staining in most cases - achieves total clearance in many jaundice instances.
- Bleaches out bile pigments only. Will not alter normal skin pigments.
- Requires no special techniques beyond ordinary pre-embalming treatments.
- Tintorial content may be intensified by the addition of Icterine dyes.

SKU	Size	Qty	Index
105028	1 litre	12	30

Chromatech & Chromatech Pink

With exclusive Chromatan Dye. For those who want a high intensity colouration in a red-brown or pink hue.

Today, funeral service professional's demand that a high degree of natural colouration be imparted to the tissues from within, by the dye in the arterial chemical itself. This is not just to save time that might otherwise be spent on cosmetic application. Technically proficient embalmers know that colouration from within looks more natural than anything that can be applied externally.

Dodge Chromatech is also particularly useful when treating dehydrated or emaciated cases and with the addition of a sufficient amount of Dodge Restorative, facial features and depth may be restored without the need of time consuming tissue building procedures.

Performance Highlights:

- Provides medium firming.
- With Plasdoform - Dodge's patented embalming breakthrough.
- Contains its own humectant. Soluble, not animal based.
- With the exclusive Chromatech dye system. Not available in any other arterial.

Product	SKU	Size	Qty	Index
Chromatech	109005	1 litre	12	21.5
Chromatech Pink	109020	1 litre	12	21.5

Regal 30

By combining a powerful preservative foundation with Dodge's non-fat based humectant Vasculin, Regal provides the embalmer with an arterial formula capable of increased firming capability, without the concerns of dehydrating delicate tissues. It's specialised dye system provides natural tissue colouration, while minimising the change of inconsistent or blotchy distribution.

Performance Highlights:

- Index 30 dependable firming in the medium to high range.
- Controlled release of preservative.
- Natural cosmetic effect.
- Water soluble humectant.
- Uniformly distributing dye system.

SKU	Size	Qty	Index
107029	1 litre	12	30

Plasdopake & Plasdo 25

Plasdopake is identifiable as a humectant arterial formula by its opaque, flesh toned characteristics. Although seemingly viscous in appearance, it is actually just as free flowing as our non-humectant arterials. Plasdopake is a non-fatty, non-emulsified chemical compound with Dodge vasculin substituted as the humectant factor.

Like other Dodge Humectant Arterial chemicals Plasdopake and Plasdo 25 are particularly useful when treating dehydrated or emaciated cases. The addition of Dodge Restorative will help to restore natural facial contours without the need for tissue building procedures.

Performance Highlights:

- Monitored firming. Molecular screening controls rate of firming acceleration. Releases formaldehyde as needed.
- Clot Dispersal. Plasdoform base peptizes and diffuses clots, clumped cells, nutrient gels.
- Neutralizes antibiotic drug effects.
- Rehydrates tissue cells. Penetrates cell membrane. Moisturizes cell proteins. Restores lifelike plasticity.
- Dispels death pallor. Imparts natural translucence to the skin. Dispels dull putty grey colour.
- Water soluble formula. Contains no emulsified animal fats. Won't settle out of suspension and block circulation.
- Disinfects as it preserves. Powerfully active against pathogens. Stabilizes proteins. Halts decomposition.
- Polarizes cell proteins. Binds tinctorial undertones to the tissues by polar attraction. Imparts colour vibrancy.
- Operationally simple. Permits fast, trouble free injection. No complex procedures.

Product	SKU	Size	Qty	Index
Plasdopake	107016	1 litre	12	18
Plasdo 25	107024	1 litre	12	25

Metasyn Firming

Metasyn offers the embalmer an all-purpose medium of remarkable flexibility and precise operational control. This formula gives the progressive practitioner every desirable feature of a premium performance arterial chemical - and more! Plasdoform embalming takes the doubts and guesswork out of injection procedures and insures exceptional levels of embalming results on all types of cases. A popular choice for effortless excellence.

Performance Highlights:

- All-purpose arterial with monitored firming rate. Gives working solutions the molecular weight of human blood.
- Produces exceptional cosmetic refinements.
- Leaves tissue pliant with fine-textured skin tone.
- Antimetabolite action dispels jaundice and post mortem discolorations.
- Preserves completely with gentle, progressive firming and natural tissue plasticity.
- Peptizing constituents insure free circulation and complete protein fixation.
- Contains lab-measured, self-adjusting tinctorials.

SKU	Size	Qty	Index
121021	1 litre	12	30

Jaundofiant Basic

Basic: This element of the two part Jaundofiant system contains the basic chemical constituents for protein fixation and jaundice stain reduction.

Performance Highlights:

- Provides medium firming.
- With Plasdoform - Dodge's patented embalming breakthrough.
- Contains its own humectant. Soluble, not animal based.
- With the exclusive Chromatech dye system. Not available in any other arterial.

Product	SKU	Size	Qty	Index
Jaundofiant Basic	106013	473 ml (16 oz)	24	19.5
Jaundofiant Control	106021	473 ml (16 oz)	24	N/A
Jaundofiant Kit	106018	Jaundofiant Basic 473 ml (16 oz) Jaundofiant Control 473 ml (16 oz)	12 12	N/A

Jaundofiant Control

Control: This element of the dual Jaundofiant system contains the chemical catalyst which activates and intensifies the stain reducing components of the basic arterial. The control unit must be intermixed with basic for maximum jaundice embalming effectiveness. It is bottled separately to maintain the dual components at full chemical capacity.

Performance Highlights:

- Reduces yellow staining in most cases - achieves total clearance in many jaundice instances.
- Bleaches out bile pigments only. Will not alter normal skin pigments.
- Requires no special techniques beyond ordinary pre-embalming treatments.
- Tinctorial content may be intensified by the addition of Icterine dyes.

Standard Arterial

A pale pink coloured fluid, suitable for use as a general purpose embalming fluid for problem free cases. Universally applicable in arterial and hypodermic injections.

SKU	Size	Qty	Index
108031	1 litre	12	26

Icterine
Regular

Icterine
Peach

Icterine
Red

Icterine
Suntan

Icterine
Tan

Icterine

Icterine is our most modern, concentrated arterial dye. It is a super concentrated, non-dehydrating tinctorial additive specifically formulated to give the embalmer selective and precise control over tissue colouring in an infinite range of ethnic tissue tints.

Performance Highlights:

- Regular: Red tones. Recommended for infants and light completions.
- Suntan: For dark complexions.
- Peach: Reddish-orange tone. As popular as regular Icterine. Also intended for elderly cases, naturally yellowish complexions and Asian types.
- Tan: For somewhat weathered complexions. As the name suggests, similar to Suntan, but has only the brown tones without the reddish colouration.

Every embalmer will have their own preferences when it comes to the addition of dye additives. We recommend starting with a small amount of dye added to your embalming solution. The amount of dye used can be increased as you progress, if the colouration is not to your satisfaction.

Product	Colour	SKU	Size	Qty
Icterine	Regular	552026	473 ml (16 oz)	1
	Peach	552075	473 ml (16 oz)	1
	Red	552139	473 ml (16 oz)	1
	Suntan	552117	473 ml (16 oz)	1
	Tan	552036	473 ml (16 oz)	1

Profloflow

Profloflow is the newest pre/co-injection chemical and represents the largest achievement in embalming technology since the introduction of 'Plasdoform-based' chemicals. The advanced action of Profloflow is produced using Cosolvent technology. This new formula greatly increases the lubrication in the vessels, functions in a wider pH range as well as water hardness conditions, and aids in penetration of the arterial solution into the tissues. Recommended use is 473 ml per 3.7 litres or 16 oz per gallon.

Performance Highlights:

- Fully compatible with all Dodge arterial and co-injection chemicals.
- A proprietary blend of Dodge Cosolvent technology, including high performance wetting agents, and humectants provide optimum flow, perfusion and colour distribution.
- Provides excellent performance in emaciated and medicated bodies.
- Free from oils, silicone, lanolin and other outdated raw materials.
- Provides good results in varying pH and water hardness conditions.
- Does not contain formaldehyde, phenol or other toxic or highly flammable ingredients.

SKU	Size	Qty
107031	1 litre	12

Metaflow

Metaflow is a Plasdoform-based pre/co-injection chemical specifically formulated to intensify embalming chemical receptiveness within the vascular system. Used in routine pre and co-injection procedures, Metaflow speeds up injection operations, saves time and contributes importantly to superior, more predictable embalming results.

Performance Highlights:

- Restores permeability to cell membranes. Replaces moisture balance. Releases antibiotic deposits from cells.
- Speeds flow by lubricating blood cell surfaces. Accelerates drainage.
- Detoxifies residues of addictive drugs and chemotherapeutic agents which impair preservation.
- Reduces viscosity of coagulated blood. Disperses vascular obstacles.
- Inhibits precipitation of blood in aged cases. Reduces agglutination. Dissolves fatty gel deposits.
- Prevents cell clumping and clot formation.
- Restores emaciated cases by creating natural moisture balance in tissue cells.
- Disperses jaundice and other post-mortem discolouration.

SKU	Size	Qty
340080	1 litre	12

Halt GX

Halt GX is an accessory co-injection chemical which will 'halt gas production. Tissue gas cases can generally be classified as 'extreme' cases, this is where the 'X' came from in the name. It Halts Gas in eXtreme cases. The product should be used on any case which:

- Exhibits advanced decomposition.
- Drowning is the cause of death.
- Has experienced injury to the abdominal area.
- Has signs of distension or crepitation.
- Has visible bubbling in the drainage or distended veins.
- Exhibits active tissue gas formation.
- Has had abdominal surgery immediately prior to death.
- Is septic.

Performance Highlights:

- Effective when hypodermically injected into tissue.
- Compatible with all Dodge chemicals and all brands of embalming machines.
- Shows effectiveness during embalming by inhibiting gas production immediately.
- Formaldehyde-free and Phenol-free.
- The only chemical on the market which has been independently inhibition tested for 100% effectiveness against active tissue gas.

SKU	Size	Qty
505075	1 litre	2
505076	1 litre	12

Edemaco

Embalmers are seeing an increase in bodies swollen from oedema with consistently increasing frequency due to new medications and hospital techniques. After years of rigorous testing, our laboratories have developed the Edemaco formula which achieves startling results in its ability to reduce swollen tissue with a unique combination of moisture controlling components.

Performance Highlights:

- Ultra effective in reducing oedematous conditions.
- Reduces swollen tissues without extra procedures.
- Thoroughly field tested.
- Potent in small quantities.
- Creates temporary additional firmness.

SKU	Size	Qty
506006	1 litre	2
506005	1 litre	12

Restorative

Dodge Restorative is carefully formulated to carry moisture and humectant conditioners directly into the dried protein substance of dehydrated tissue cells. The action is purely biophysical.

Performance Highlights:

- Controls dehydration.
- Halts syneresis of protein gels.
- Rebuilds tissue physically.
- Restores cellular hydration.
- Prevents tissue shrinkage.
- Moisturises from within.
- Velvetizes skin texture.
- Restores natural contours.
- Stimulates drainage.
- Intensifies arterial diffusion.
- Restores drawn features.
- Enhances illusion of repose.
- Treats frozen, refrigerated and dehydrated cases.

SKU	Size	Qty
360018	1 litre	2
360022	1 litre	12

Rectifiant

Purifying chemicals, dissolved minerals and gases which are found naturally in water supply sources today are taking a heavy toll in embalming chemical and disinfectant performance. You can keep such interference down to safe levels by treating your tap water with Rectifiant when diluting injection chemicals to working strengths.

Performance Highlights:

- Corrects and conditions tap waters for embalming.
- Neutralises water purifying chemicals, minerals and gases.
- Counteracts jaundice— activating effects of chemotherapeutics.
- Penetrates bacterial "calcium-barrier" defences.
- Stabilises pH values, prevents chemical precipitation.
- Steps up working power of arterials.
- Screens out ionic adulterants bypassed by mechanical water softening equipment.
- Helps clear post-mortem and jaundice discolouration.
- Defibrinates clotted blood.
- Keeps fluid lines and tanks clean.
- Softens and helps to remove vascular blocks.

SKU	Size	Qty
320018	1 litre	12

Dri-Cav

Containing a special drying ingredient not found in any other cavity formulation, Dri-Cav Cavity was developed for use on bodies which would otherwise require reaspiration. In the course of extensive field testing, our chemists learned that they had succeeded not only in that objective, but had as well come up with a formula which our field testers found superior in many other ways.

Performance Highlights:

- Dodge's (and therefore the world's) best selling cavity chemical.
- Use one litre between the abdominal and thoracic cavities for best results.
- Excellent for cavities with unusual amounts of liquid or gas and for everyday conditions.
- Has a wintergreen odour which helps in overcoming unpleasant odours of putrefaction.
- Firms like an ultra high index cavity-but releases far less formaldehyde into the air.
- Greatly reduces liquids found upon reaspiration.

Freedom Cav

Freedom Cav is the first formaldehyde free injectable preservative introduced to the funeral profession by The Dodge Company.

This Formula Works!

You can expect distinct firmness, slightly more than with SynCav, on case after case. The preservation lasts, day after day, week after week. No gas build up, no liquid build up, no odours.

Performance Highlights:

- Keeps down formaldehyde levels. Helps with regulatory compliance.
- Complete user comfort. No fumes at all.
- Field tested on hundreds of cases.
- Proven preservation.
- Readily detectable firmness.
- Reaspiration not a requirement. Gases and liquids won't build up.
- No odours during use... or later!

Metafix

Initially formulated for correlated use with the advanced Plasdoform based arterial chemicals, Metafix has since proved itself to be a highly effective universal cavity treatment medium, with a truly remarkable performance record in producing greatly enhanced embalming results.

Performance Highlights:

- Plasdoform based cavity chemical.
- Fortified with a powerful quaternary disinfectant to secure ultra-disinfection.
- Kills infective pathogens, viruses and fungi on contact.
- Extends unique preservative features of Plasdoform to include cavity treatment.
- Little offensive chemical odour.
- Deep-penetrating, powerful.
- Non-bleaching, non-shrinking, non-cauterant.
- Firms visceral tissue without rock-like rigidity.
- Suppresses gas formation.
- Helpful in treating jaundice cases.

Dri-Cav 5

Low index, low fuming cavity chemicals are not new and have stood the test of time as generations of embalmers have relied on them for lasting and dependable results. With increasingly stringent chemical exposure limits in the embalming room and embalmers looking to increase their working comfort and address environmental concerns, Dri-Cav 5 takes low index cavity embalming to the next level. Dry, firm cavities, reduced exposure and lasting preservation.

Dodge® Dri-Cav 5 contains a drying ingredient not found in any other cavity fluid formulation. Dri-Cav 5, like Dri-Cav was developed for use on cases that would otherwise require re-aspiration, owing to unusual amounts of fluid in the cavities. In the course of extensive development and research Dodge® Chemists and MazWell® field testers found that Dri-Cav 5 performs exceptionally well, giving lasting preservation and improving the working environment in the embalming room.

Syn-Cav

Syn-Cav makes no sacrifice of functional performance for the sake of working ease alone. Allergic and fume sensitive embalmers prefer this unique synergistic full power formula because it yields maximum cavity preservation with minimal working discomfort in application. Syn-Cav takes the terror out of low index embalming - lets you breath freely without going soft on cavity treatment.

Performance Highlights:

- Top favourite of the fume-sensitive embalmer.
- Synergistic formula insures positive preservation with full working comfort.
- Fortified with patented Plasdoform.
- Penetrates deeply, preserves, deodorises, disinfects.
- Suppresses fungi, yeast and viruses. Kills cavity bacteria.
- Inhibits cavity gas formation.

SKU	Size	Qty	Index
250104	1 litre	12	5

Spectrum

Spectrum covers the spectrum of features you need in a cavity chemical... gives you all the comfort of Syn-Cav and firming which far surpasses that of any other low fuming chemical ever sold. Spectrum combines the best features of the worlds top selling cavity chemical, Dri Cav, with those of the world's top selling low fuming cavity, SynCav. Contains no more formaldehyde than SynCav (5%) yet it delivers real 20% plus firming action.

Performance Highlights:

- Great for allergic and fume-sensitive embalmers.
- Fortified with Plasdoform and synergism.
- Contains Dri-Cav's unique drying components.
- First and only truly firming "fumeless" cavity.
- No worries about gas build up.
- Kills viruses, bacteria and fungi.
- Special deodorising properties... Clean fresh odour.

SKU	Size	Qty	Index
245018	1 litre	12	5

Cav-5

Cav-5 covers a range of features that you would expect from a cavity fluid... with a reduced level of formaldehyde. With many of the benefits of Dri-Cav and the low fuming qualities of Syn-Cav, you will find that it delivers 20% plus firming action with only a 5.25% formaldehyde level.

Performance Highlights:

- Great for the fume-sensitive or allergenic embalmer.
- Reduces worries about gas build-up.
- Fumeless firming cavity chemical.
- Kills bacteria, viruses and fungi.
- Has unique drying components.
- Benefits from Plasoform and Synergism.
- Clean fresh odour.

Standard Cavity

Although this traditional cavity chemical does not offer the advanced chemical refinements of more recent formulations, its constituents have been modified to conform to more modern performance standards. It is still favoured by many embalmers and delivers fast, dependable results. There is nothing delicate about Standard Cavity, but it does its work with commendable effectiveness and outstanding economy.

Performance Highlights:

- Fully fuming.
- Strongly permeates visceral tissue and organs.
- Deodorises and disinfects as it preserves.
- Cauterises and bleaches upon contact.
- May be used in all standard cavity embalming applications where firming control and working comfort are not essential factors.
- Suitable for use as a cavity pack when used with cotton wool and plastic wrap.

260031	1 litre	12	22.5

Permacav 50

Permacav 50 is especially formulated for embalmers who want to know they are getting the maximum formaldehyde percentage modern chemistry can place in a bottle. For professionals who want the absolute utmost in firming!

Performance Highlights:

- Highest index available to modern embalmers.
- Petrifies visceral tissue to rock-like hardness.
- Positive, rapid reacting, powerfully penetrative.
- Bleaches and cauterises on contact.
- May be used in external applications when wrapped.

Dis-Spray

Formaldehyde-free, fortified with Mold-x, this new formula provides all the power you need. Dis-Spray is still an exceptional disinfectant and deodorising topical embalming spray.

Performance Highlights:

- Cuts through surface dirt and body-oil film. Helpful in removing oily exudate when a high fever has occurred prior to death.
- Exceptional disinfectant and deodorising topical embalming spray.
- Enhanced with Mold-x.
- Can be used on even the most delicate tissues including infant cases and the most tender facial areas.
- Very useful as an additive to arterial solution when treating cases of tissue gas.
- Use 100 ml of Dis-Spray per litre of solution to help eradicate gas bacillus.

Basic Dryene

Dodge Dryene has earned its reputation as one of the most useful and versatile chemicals in the funeral profession. With almost infinite technical applications in embalming this cauterant merits a place in every embalming room. Dryene more than pays its way in operational ease, professional convenience and outstanding embalming performance.

Performance Highlights:

- Treats broken skin areas.
- Effectively dries, bleaches, cauterises and deodorises.
- Effective as a cavity chemical in cases where tissue gas is evident.
- Basic Dryene is formulated to bleach strongly.

SKU	Size	Qty
515032	1 litre	1
515034	1 litre	12

Dryene II

Works at the same rate as Basic Dryene as well as bleaching and cauterising in the same manner. No irritating odour.

SKU	Size	Qty
515041	1 litre	1
515042	1 litre	12

Dryene II Gel

Dryene II Gel is the next generation in cauterising and bleaching products from Dodge. A departure from the standard formaldehyde cosmetic gels, containing no phenol. Dryene II Gel can be used without experiencing formaldehyde exposure or the pervasive odour of phenol. The improved thicker consistency of Dryene II Gel allows the product to stay in contact with the affected tissue, allowing better penetration and cauterisation.

Performance Highlights:

- Phenol and formaldehyde-free.
- Cauterises raw or donated tissue areas.
- Bleaches bruised areas.
- Gel consistency stays in place on vertical surfaces.
- Easily applied with brush.
- Insoluble in water, use Feature Builder Solvent to clean off.

SKU	Size	Qty
515051	350 g	1

ThanaGone with trigger spray

ThanaGone a formaldehyde neutralising spray.

Performance Highlights:

- ThanaGone combines chemically with formaldehyde rather than masking it.
- A terrific aid in complying with COSHH regulations.
- Can be re-used if the source continues to generate odours.
- Repeated spraying can cause some floors to become slippery or tacky. Use caution when walking. A damp paper towel quickly and easily removes any undesirable film.

Product	SKU	Size	Qty
ThanaGone	550002	16 oz (473 ml ml)	1

Dry Wash II

Specially formulated for mortuary hairdressing, Dry Wash II is a fast drying de-greasing shampoo that won't change hair colour or interfere with permanents or natural curls. It can be used on a clean pad to remove unabsorbed massage cream, clean brushes, thin cosmetics and feather wax during restorative procedures.

Performance Highlights:

- Leaves hair manageable, soft and lustrous.
- Revives permanent waves.
- Removes grease, dandruff and 'cradle cap'.
- Dries quickly-saves hairdressing time.
- Thins cosmetics and cleans brushes.
- Excellent solvent, removes creams, helps smooth wax during restorative procedures.
- Removes stains from fabric (always test fabric first).
- Contains no trichloroethylene.

SKU	Size	Qty
520072	500 ml	1
520071	500 ml	6

Syn-Gel HV

Syn-Gel allows a very low concentration of formaldehyde to do the work which otherwise requires very high concentrations. The preservative-disinfectant action of Syn-Gel results in fumeless comfort with thorough preservation. Syn-Gel also incorporates another Dodge breakthrough: The Plasdoform molecule, which prevents "walling off", replaces jaundice pigments and affords quaternary disinfection potency.

Performance Highlights:

- Great on hands, face or anywhere, where more surface penetration is required. Paint on and cover with plastic wrap.
- For autopsied cases, paint or pour liberally onto surfaces inside the thoracic and abdominal cavities and onto ribcage and flaps.
- For cranial autopsies, Syn-Gel treats the floor of the cranial vault and inside the scalp.
- In cases of skin slip, ulceration, bed sores etc., use as a pack.
- Good for treating newly amputated areas and areas where skin has been removed for grafts.

SKU	Size	Qty
509101	440 g	1
509102	1 kg	1
509103	4 kg	1

Kaloform

Kaloform, an emollient massage cream containing formaldehyde, achieves external preservation of areas not reached by arterial injection.

Performance Highlights:

- Easy to apply.
- Aids in treating "soft" areas.
- Will not wrinkle tissue.

SKU	Size	Qty
690116	440 g	1

ACCESSORY CHEMICALS

Feature Builder Accessories

Hypodermic Needles

The MazWell Group is please to offer a full range of hypodermic needles which can be used for a variety of different tasks in the embalming room. All of the needles will function with luer lock syringes for added safety when injecting strong preservative, cauterant or tissue building chemicals. Images not shown to scale.

Syringes

Feature Builder

One of the most versatile and useful accessory chemicals we know of. This fast-setting tissue-filling gel rebuilds characteristic facials features and helps restore normal appearance to dehydrated and emaciated cases. Fills, firms and plumps without risk of after-set shrinkage. Improves and accentuates the illusion of repose in the final presentation. Available in two types: Regular for normal tissue filling and Firming for areas that need preservation as well as filling.

Regular/Firming

Performance Highlights:

- Free flowing for fast, easy hypodermic injection.
- Sets rapidly, remains stable. Won't shrink.
- Restores natural expression, normal tissue contours.
- Seals needle punctures.
- Masks facial muscle shadow, repels spotting, mottling.

Solvent

Feature builder Solvent is used for cleaning procedures after completion of tissue building and removes feature builder from hypodermic needles and syringes.

As a note of caution, we recommend that eye protection be used whenever the injection of chemicals is being undertaken. When injecting feature building products, we not only advocate the use of eye protection but also the use of luer lock needles and syringes to prevent the risk of spraying chemicals under pressure.

ACCESSORY CHEMICALS

Pore Closer

Pore closer has an exceptional broad range of practical uses throughout the embalming room. Pore closer can be used to seal exposed applications of Inr-Seel, surface lacerations, deep wounds, diseased lesions, surgical excisions, burns, sores and abrasions.

Performance Highlights:

- Restores a natural surface in every category of broken-skin conditions. Prevents leakage and forms an excellent base for artful cosmetic finishing.
- Adheres firmly, creates a naturally contoured, safely sealed and stable surface which is highly receptive to all standard restorative procedures and cosmetic components.
- Acts as its own solvent.

SKU	Size	Size	Qty
525261	Pore Closer	385 ml (13 oz)	1
992054	13 oz Brush with lid	N/A	1

Kalip Stay Cream

Kalip Stay Cream is a light coloured, firm bodied blend of rich tissue emollients contained in an adhesive base. Its consistency is heavy enough to give dependable holding action without the rigidity, skin "drawing" and surface dehydrating effects of ordinary cement like adhesives.

Performance Highlights:

- Fully workable and easily applied.
- Can be used on the delicate tissues of the eyes, lips and nostrils.
- Smooths unsightly wrinkles and folds in place.
- Useful for filling the tiny separation which can occur between lips - as well as small fissures on a lip.

SKU	Size	Qty
680021	56 g	1
680026	440 g	1

Inr-Seel

Specifically formulated to safeguard against troublesome post-embalming upsets, these mastic moulding and holding compounds are numbered among the most versatile and useful in the embalming room. When either of these compounds is exposed to the air, it should be coated with Pore Closer or Perma Seel to avoid shrinkage that would otherwise occur.

Performance Highlights:

- Soluble in cold water, clean up is easy.
- Fills out eye lids and seals hypo punctures, bullet holes and ear leakage.
- Can be used to align crooked noses and fill mouth contours in lieu of cotton wool.
- Excellent for use on eye enucleation and cranial autopsy cases.

SKU	Size	Qty
555011	1 lb 3 oz	1
555029	6 lb 3 oz	1

Perma-Seel

Perma-Seel is a versatile sealing medium that can be applied by brush or sprayed on to form a quick drying and transparent chemical "skin" of great strength. It won't crack, glaze, blister or peel. Available as a handy aerosol spray or in a wide mouth container for application by brush.

Performance Highlights:

- Seals seeping lesions, cuts, amputations.
- Secured external packs and bandage bindings.
- Dries rapidly to form a smooth flexible "Skin".
- Adheres firmly to tissue and fabric.
- Impervious to body fluids and embalming chemicals.
- Speeds and simplifies many prep room operations.
- Requires a separate solvent for clean up.

Product	SKU	Size	Qty

Adhesives

MazWell Ultra Bond

Rapid bonding for a range of materials including metals, plastics, elastomers, wood, paper, leather and fabric.

Performance Highlights:

- Colour : Clear
- Base : Ethyl
- Viscosity : 90 – 120cps
- Shear Strength : 15-25N/mm²
- Fixture Time (EPDM) : <5 seconds

MazWell Ultra Bond Gel

A non drip gel designed for difficult to bond materials which require uniform stress distribution and strong tension/shear strength.

Performance Highlights:

- Colour : Clear
- Base : Ethyl
- Viscosity : Gel
- Shear Strength : 15 – 25N/mm²
- Fixture Time (EPDM) : <5 seconds

MazWell Ultra Bond Activator

Activator for the rapid curing of cyanoacrylates that deposits the correct balance of neutralising ions on the surface, stimulating attraction for the adhesive and preparing the surface for bonding.

Performance Highlights:

- Colour : Clear
- Base : Solvent
- Viscosity : Liquid

Products	SKU	Size	Qty

**Zip Lip**

Zip Lip is a fast setting liquid adhesive for immobilising lips and eyelids. It is truly superior to all other cements of this type on the market.

Performance Highlights:

- Prevents unsightly partings.
- Holds well, yet remains invisible.
- Sets firmly and can be separated and re-set if adjustments are necessary.
- For those who prefer a bond considerably less tenacious than that created by the cyanoacrylates.
- Brush applicator attached to cap.

SKU	Size	Qty
690020	15 ml (0.5 oz)	1

**MazWell ThanaTape**

MazWell ThanaTape is a sealing material and has been specially developed for embalming. For sealing incisions, lacerations, abrasions, punctures, leaking wounds and skin slip.

SKU	Size	Qty

761320	2" x 5 yard spool	1

**White Duct Tape**

Known for its surprisingly strong adhesive properties, even under moist conditions.

SKU	Size	Qty
761312	60 yard roll	1

ThanaSorb (NEW)

A fresh linen scent absorbent powder with the capacity to absorb copious amounts of moisture in mortuary and funeral applications. Simply apply ThanaSorb liberally to the required area.

Performance Highlights:

- Cleans up prep room spills quickly and easily.
- For use inside plastic garments on cases to control or prevent leaking.
- For coffins used in repatriation as well as those placed into vaults or mausoleums.
- Can also be used in the cavities of autopsy and donation cases.

SKU	Size	Qty
530452	760 g bottle	1
530453	4 kg tub	1

Sanisorb

A must have in any embalming room, Sanisorb can be used in any situation where a dependable absorptive product with a pleasant scent is required.

Performance Highlights:

- Absorbs copious amounts of moisture.
- Perfect inside plastic garments where leakage or oedema may cause problems.
- Excellent for use in coffins of repatriation cases.
- Use in coffins stored in vaults or mausoleums.
- Cleans up any embalming room spills instantly.
- Absorbs moisture in the cavities of autopsy cases as well as inside bone donation incisions.
- Uses for Sanisorb are limited only by your imagination.

SKU	Size	Qty
530451	2 kg	1

QS Powder

Performance Highlights:

- Forms powerful, positive and dependable closures.
- Contains highly effective deodorising and preserving chemicals.
- Pleasant to use, does not create dust in the air.
- Will not cake or turn gummy, Q-S Powder lasts for years if container is kept closed.
- Excellent for incisions, wounds, open lesions, suture, needle holes, body orifices and autopsy cases.
- Works virtually on contact. No waiting around for a seal to develop.

SKU	Size	Qty
560111	500 g	1
560140	3.5 kg	1

Viscerock FF

Viscerock FF (Formaldehyde Free) is nearly dustless, free flowing and will not cake in any environment. Viscerock FF will dry and firm moist tissues and adhere to all tissue surfaces. It can be used in plastic garments to dry oedematous limbs and inside the cavities of autopsied cases. Pleasant in use, Viscerock FF is great for use by fume sensitive embalmers and will create no unpleasant odours during use.

SKU	Size	Qty
535115	2.25 kg	1

Action Powder

A real must have for any and every embalming room. Action powder delivers fast dependable preservation to areas not receiving fluid through arterial injection. Action powder may be used freely on autopsy cases for treating the trunk walls or cranial vault. Action may also be used for cases requiring deodorising and preservative treatment which are beyond arterial injection.

Performance Highlights:

- Assured performance on cases where arterial injection could be difficult if not impossible.
- Excellent inside caskets, grave vaults, mausoleums and crypts.
- Very useful for treating bed sores, cancerous or putrefactive areas.
- Effective in lieu of hypo work on wet or dry decomposed cases or autopsy cases where trunk walls do not receive adequate fluid during injection.
- Use with plastic undergarments to preserve and dry oedematous limbs.
- Useful for treating infant cases where traditional treatments would be impracticable.
- Used by many for the treatment of exhumed or disinterred cases.

536098 (to be discontinued)	4 kg	1
536097 (updated classification)	1 kg	1

Paraformaldehyde Prills

A convenient way of applying Paraformaldehyde to the surfaces or cavities of a body in a relatively dust free manner. Paraformaldehyde Prills can be used in lieu of Hypo work on autopsies and difficult cases, or applied to bodies where decomposition has rendered arterial injection impossible. Paraformaldehyde Prills fume heavily and care should always be taken to apply in a well ventilated area.

SKU	Size	Qty
910205	3.5 kg	1

Please Note

As with all products containing Formaldehyde, the operator should be sure to use them in a well ventilated area. For more difficult situations, please see our range of Formaldehyde respirators.

ABSORBENT PRODUCTS

DodgeSorb Absorbent Sheets

Each sheet consists of three layers: a top fabric layer, a DodgeSorb-impregnated middle layer and a plastic bottom layer. Even after exposure to moisture, they retain integrity and can be removed from their area of use.

SKU	Size	Qty	Absorbs (approx)	Use
038346	25" x 72"	1	4.6 litres of fluid	Over/under the body
038341	63" x 90"	1	6.2 litres of fluid	Wrapping entire body

MazWell® Disposable Sheets

Hardwearing, absorbent and removal sheets. Perfect for use during first calls.

SKU	Size	Qty
760842	61.5" x 85.5"	50

DodgeSorb Absorbent Liners

These liners consist of an exposed layer of DodgeSorb impregnated material, which will turn to loose gel in the presence of moisture. Once in place, this sheet must remain there.

- Ideal for insurance for oedematous cases or those being repatriated by road, air or sea.
- For use inside coffins and caskets being repatriated or entombed.

SKU	Size	Qty	Absorbs Approx
038376	24" x 86"	1	5 litres of fluid

DodgeSorb Absorbent Sleeves/Stockings

- Fluid impervious white plastic sleeves and stockings have an inner liner that contains a layer of DodgeSorb to provide added protection by capturing and containing fluids.
- All openings are elasticated to provide a good fit and reduce leakage.

Product	SKU	Qty
Sleeves	760882	Pair
Stockings	760885	Pair

DodgeSorb Absorbent Inserts

These are smaller absorbent pads, with a DodgeSorb layer inside two fabric layers.

Product	SKU	Size	Qty	Absorbs Approx	Use
Small Insert	038331	3.25" x 10.5"	5	232 ml of fluid	For packing cranial thoracic and tracheal stomata
Medium Insert	038326	3.25" x 14"	5	478 ml of fluid	A tube like pad through which a pipe prosthetic can be inserted or used
Large Insert	038321	3.25" x 37.5"	5	1 litre of fluid	Fits around long bone prosthetics

DodgeSorb Cranial Caps

Cranial caps are designed to absorb seepage due to autopsied or mutilated heads. Inside the cap is absorbent, while the outside is fluid impervious. Conveniently conforms to the shape of the head. Slide under the head and the cap sinks into the coffin or casket pillow.

SKU	Qty	Absorbs Approx
750594	12	3 litres of fluid

DodgeSorb Absorbent Kit

DodgeSorb absorbent kit includes: 5 small inserts, 5 medium inserts, 2 large inserts, 1 white liner and 1 cranial cap. A convenient way of keeping the range of DodgeSorb items in the embalming room. Each kit contains five small inserts, five medium inserts, two large inserts, one white liner and one cranial cap.

CHEMGENE MEDLAB FROM BYOTROL

CHEMGENE MEDLAB Multi-Surface Disinfectants are proven to be effective against bacteria, yeasts, fungi, and viruses.

CHEMGENE MEDLAB Multi-Surface Disinfectants are suitable in a variety of settings within laboratory, forensic and healthcare environments. For use on surfaces and equipment including furniture, frequent touch points, centrifuges, incubators, stepping plates and disrobing tents, CHEMGENE is a versatile disinfectant ideal for implementing effective biosecurity measures.

The combination of active substances in CHEMGENE ensures that equipment and instruments can be routinely cleaned and disinfected to a consistently high standard, with less risk of antimicrobial resistance.

Performance Highlights:

- Robust data set performed to European test standards for human health and laboratory environments.
- Broad spectrum protection even in the presence of organic soil.
- Diluted solution remains effective for 3 months when stored correctly.
- Economical dilution rates, simple and easy to dilute.
- Complies with relevant CLP, REACH, and biocidal regulations in UK & EU.
- Manufactured in the UK and all packaging is recyclable after use.

Kalon Pigments

Designed to be a fast and effortless system for complexion matching and application, The Kalon system is widely favoured as one of the most flexible and versatile cosmetic systems of the funeral profession. The Kalon System produces an excellent, natural looking cosmetic finish and is economical in use.

Performance Highlights:

- Available in 21 dense covering shades for blending and for masking blemishes.
- Used with the Kalon creams, they produce an infinite range of intermediate skin tones.

Kalon Massage Cream

- Available in white for cosmetic massage and foundation treatment.
- Also in eight non-masking tinting shades.
- Richly emollient, smooth, non-caking.

Please note: The colour samples shown indicate the colour of the cosmetic in the jar. In the case of opaque cosmetics, this is also the colour you'll see when the cosmetic is applied to the skin. This is not necessarily so for translucents. Kalon Cream Blond, Pink and Deep Flesh are three shades which do not look the same in the jar and on the skin. Blond for example is not at all orange when applied; it simply imparts a warm flesh tone. Also please understand that some of the colours shown here will be imperfect reproductions of the colours of the cosmetics. This is a function of the limitations of modern four-colour printing, but will serve as reasonable guides. These matches are still relatively close.

Kalochrome Cream

Kalochrome Creams can be spread heavily (opaquely) over areas requiring covering, and then thinly (translucently) over other areas on the same body where covering is not required. When applied at medium thickness the Kalochrome cream tends to be semi opaque.

Remarkable lifelike duplication of natural complexion characteristics may be quickly and easily achieved by interblending and applying these smooth, rich tinted creams with Kalochrome Cosmetic Powder. Non-caking and easily blended, these creams are a cosmetic medium of great versatility for creating truly artistic cosmetology.

Aquachrome Cream

Aquachrome cosmetics are water-based like the cosmetics available over the counter, however they are formulated specifically for use in our field. It's translucent, so it imparts a natural no masking tone to the skin. Included in the formula are:

- Natural moisturisers and softening agents, derived from lanolin and cholesterol, which are similar to the lipids in the fat of the skin.
- Hygroscopic materials which penetrate the skin, absorb moisture and leave no greasy feel.
- Materials which form water-resistant skin films with a fine texture and a non-drying effect.

Performance Highlights:

- Every ingredient in Aquachrome is non-toxic and non-irritating to the skin.
- Special ingredients give stability of viscosity and emulsion for long shelf life.
- Ingredients are cosmetic grade, including the pigments which are accepted for use on living skin.
- Preservative system is a broad spectrum one, effective against gram negative bacteria such as pseudomonads and against yeast and moulds.

Subtle blending finishing powder for use after cosmetic application.

SKU	Size	Qty
642955	113 g (4 oz)	1

Complexion Cream

A particular favourite of The Dodge Magazine author Dennis Daulton, these cosmetics offer true versatility and can be applied to provide translucent or opaque coverage.

Performance Highlights:

- Complexion Creams are to an extent dual purpose and depending on the thickness of the application can be translucent or opaque.
- Complexion Creams tend towards translucency more than Kalochromes. Apply a light to moderate amount over normal skin, then apply a heavier layer to cover razor burn or ecchymosis.
- Testers recommend the flesh shade on male or female Caucasians of average skin colour.

Perma Liquid

The Perma concept of embalming cosmetology was specifically developed to extend the scope of the embalmer's art beyond that of ordinary cosmetic preparations. The Perma pigments and powders simplify and accelerate the cosmetic procedure. You'll find that they function with exceptional effectiveness even under the most difficult post-mortem conditions. Intermixable, fast drying, non-caking. These cosmetics will not crack or peel and provide an infinite colour range with superb marking qualities.

Perma Thinner

A thinner for when Perma Liquids get too thick.

French Rose Tint and Complexion Spray are translucent liquid cosmetics made from almost exactly the same base of solvents. It is the dyes used in each shade of the two products that account for the subtle differences in the seven tones. These tints enhance tissue colouration from the arterial fluid and help the embalmer to product a faultless and life like finish to the facial tissues and hands of the deceased. Applied by brush or atomiser these tints produce a delicate, natural looking glow which is transparent and non-masking. Used routinely French Rose Tint and Complexion Spray will help to recreate the true tones of living skin on a wide range of complexion types.

Complexion Spray

- Easily applied by atomiser or brush.
- Complexion Sprays produces delicate, natural looking glow of transparent non-masking colour.
- Help recreate the true tones of living flesh on a wide range of complexion types.

Please note: The three colour swatches look alike because all three shades of French Rose Tint look alike in the bottle. There is a slight difference in darkness between each shade when applied.

Softouch

Old fashioned liquid powders separate out of suspension almost between brush strokes, thus requiring constant recapping and agitation, but Softouch Liquid Powder stays in suspension longer.

- Accelerated drying time is another advantage.
- Far less costly than other liquid powders.
- Packaged in convenient plastic bottles for easy decanting.
- Formulated to simulate natural skin tone, creating a complexion colouring that seems to radiate from within the skin.
- Transparent quality of the liquid powder suspension prevents any masking effect from covering the natural marking and skin pigmentations.
- Creates a truly lifelike appearance.

Silicone Rubber Cosmetic Heads

Dodge is pleased to offer three faces for Cosmetic and Restoration Training. The faces are removable for easy cleaning.

One head is free of restoration challenges yet allows practising on cosmetic applications and shadowing. The other two have various injuries that will require some degree of wax restoration and cosmetics. The injuries are consistent with what you would expect from a motor vehicle accident ranging from missing section of ears, damaged facial features including noses and lips, and scalps with large incisions.

All types of cosmetics can be applied to the silicone faces as well as wax. When done, the faces are cleaned with soap and water or Dry Wash II.

- The angled base is made of hard rubber and measures 6" wide x 6.5" deep and 10.5" high.
- Each face when placed on the base is approximately 7.5" wide x 9" deep and 11" high.

Product	Injuries	SKU	Qty
Male Head with No Injuries	N/A	680108	1
Male Head with Injuries	Damage to ears, chin, lips, nose, scalp, eyebrows and cheeks	680106	1
Female Head with Injuries	Damage to ears, chin, lips, nose, scalp, eyebrows and cheeks	680107	1

MazWell® Cosmetics

Developed for the funeral profession by funeral professionals, these products are easy to apply with a minimum of different colours to use, eliminating a shelf full of unwanted, unneeded cosmetics. These cosmetics have everything you need to achieve professional results from the natural 'no makeup' look (translucent), to the most difficult cases that require covering cremes (opaques), without the heavily made up pancake look. No mixing or blending required.

Silcolan

Silcolan is a clear emollient spray which can be applied to all viewable surfaces of the body before, during and after embalming. Silcolan will seem to soak in as it dries leaving a clear film. Silcolan is excellent when sprayed onto the facial features of the deceased prior to refrigerated storage before preparation.

- Unique blend superior to all similar spray emollients currently available. Contains silicone, lanolin derivatives, emollient esters and jojoba oil (as well as other ingredients).
- Creates a smoother texture and will prevent moisture loss, lubricates and maintains tissue pliancy.
- Compatible with all types of cosmetic application.
- Can be sprayed as a lubricant on arterial tubes, drainage tubes and trocars. Allows ease of entry and can prevent vessels from being ruptured. Applying Silcolan to the embalming table will assist with transferring the deceased from the tray or stretcher and prevent drainage from adhering.
- Environmentally preferred pump style, recyclable container.

Product	SKU	Size	Qty
Pump	619001	150 ml	1
Aerosol	619000	250 ml	1

Undercoat

Undercoat is an opaque cosmetic meant to cover discoloured areas without creating a painted effect. Used over discolourations caused by injury, ecchymosis, intravenous punctures, burns as well as over waxed areas and areas of extensive restorative work.

- Even in cases where bleaching chemicals can't remove a stain, Undercoat will cover it.
- Undercoat will not crack or peel after drying when applied in thin layers, nor will it lift off when touched. It is intended that further cosmetics be applied over Undercoat after application.
- Equally valuable in covering stains of the hands as well as the face.
- No powder required to set Undercoat and there's no waste.
- The propellant in Undercoat contains no fluorocarbons.
- Undercoat will create no dehydration problems as some spray cosmetics can.

Easyway

- Easyway, a non wax product, is a system of components requiring mixing.
- Less likely to be dislodged by touching from a family member.
- Regular kit is 4 oz of powder, 4 oz of liquid, mixing cups, a spatula and directions.
- Toner kit contains four 1.5 oz bottles of pigment which can be mixed with Easyway components to achieve specific colours.
- Accepts regular cosmetics after curing.

Brushes - Spreading & Tinting

Brush measurements are stated in terms of the length across the bristles to the end of the ferrule. That is, the measurement is taken at the point where the bristles unite with the metal sleeve. Brushes shown are not to scale.

1" Cream Spreader

A high quality white bristle brush designed for fast, easy application of standard cosmetic creams. Tapered bristles permit smooth uniform distribution.

Brush Size	Length	SKU	Qty
1"	9.25"	701938	1

1/2" Liquid Spreader

Full - bodied, flexible bristles for applying liquid pigments and light creams to small areas.

Brush Size	Length	SKU	Qty
1/2"	8.25"	701987	1

1" Tint Spreader

High grade, long bristled brush is specially designed for distributing liquid tints over large areas. May also be used with light creams and "tamping" powder into cosmetics.

Brush Size	Length	SKU	Qty
1"	7.25"	701821	1

1/4" Round Tinting

Fine pointed, springy brush designed for depositing and distributing liquid pigments over confined areas. Gives precision linear and edge control. Bristles closely resemble human hair and may be used in restorative replacement of eyebrows and eyelashes.

Brush Size	Length	SKU	Qty
1/4"	8"	701748	1

3/8" Tinting

Flat brush recommended for brushing on tints.

Brush Size	Length	SKU	Qty
3/8"	7.5"	701996	1

3/4" Tinting

Broad, flat profile for brushing liquid cosmetic pigments or light bodied creams over extensive areas.

Brush Size	Length	SKU	Qty
3/4"	8.5"	701961	1

3/4" Feature Tinting

Velvety soft bristles in a flat short haired brush, recommended for applying cosmetic tints to the mouth, eyes and cheeks. A premium quality brush.

Brush Size	Length	SKU	Qty
3/4"	8.625"	701896	1

Brushes - Stippling & Dusting

Brush measurements are stated in terms of the length across the bristles to the end of the ferrule. That is, the measurement is taken at the point where the bristles unite with the metal sleeve. Brushes shown are not to scale.

1/2" Stippling

Flat brush recommended for brushing on tints and stippling coarser pores around the mouth.

Brush Size	Length	SKU	Qty
1/2"	6.5"	701805	1

1/2" Coarse Stippling

Standard grade flat white bristle brush. Recommended for stippling areas characterised by coarse pores or deep lines.

Brush Size	Length	SKU	Qty
1/2"	6.625"	701862	1

1/2" Fine Stippling

Superb stippling brush specially bristled to produce ultra-fine pore simulation on delicate facial tissue. Excellent for use on eyelids. A premium quality cosmetic instrument.

Brush Size	Length	SKU	Qty
1/2"	6.75"	701839	1

1" Fine Stippling

Fully bristled. Excellent for stippling large areas. Produce a realistic simulation of fine, delicate pores on cosmeticised surfaces.

Brush Size	Length	SKU	Qty
1"	7.25"	701854	1

3/4" Powder Dusting

Short handled, full bristled in a medium sized dusting brush. Perfect for applying finishing talcums over waxed areas and for general powder dusting uses.

Brush Size	Length	SKU	Qty
0.75	5.5"	701797	1

1" Utility Dusting

Long handled bristled brush with flat oval profile. Serves as a fine general purpose duster. May be used in all application except on waxed surfaces.

Brush Size	Length	SKU	Qty
1"	9.75"	701995	1

Lining & Detailing Brushes

Brush measurements are stated in terms of the length across the bristles to the end of the ferrule. That is, the measurement is taken at the point where the bristles unite with the metal sleeve. Brushes shown are not to scale.

1/16" Fine Lining

Very responsive fine pointed brush. Gives perfect control in the most delicate cosmetic applications. Springy, full bristled with ample colour carrying capacity.

Brush Size	Length	SKU	Qty
1/16"	7"	701888	1

1/2" Hairline Blending

Full bodied square cut and firm for blending in cosmetic creams of heavier consistency into the hair-line and around the eyes and temples. Has half inch circular contact areas.

Brush Size	Length	SKU	Qty
1/2"	6"	701722	1

3/16" Lip & Eye Lining

Short handled brush gives precise marginal control for applying lip rouge or eye shadow. Plastic sleeve protects brush when not in use.

Brush Size	Length	SKU	Qty
3/16"	4.5"	701946	1

1/8" Lip Lining

Chise-point. Long handled. Deposits sharp edged line of colour. Gives pin point control for lip lining, shading and highlighting. Excellent for blending in narrow delineations too.

Brush Size	Length	SKU	Qty
1/8"	7"	701870	1

1/4" Lip Lining

Standard width chisel-point lip liner with fine bristles.

Brush Size	Length	SKU	Qty
1/4"	7.5"	701813	1

1/2" Highlighting

Soft bristle for smooth, fully controlled highlighting. May be used to apply liquid tints and light cosmetic creams.

Brush Size	Length	SKU	Qty
1/2"	6.75"	701771	1

1/4" Fine Detailing

Long bristled for applying cosmetic tints in hard to reach, confined areas.

Brush Size	Length	SKU	Qty
1/4"	6.5"	701730	1

1/8" Ultra Fine Detailing

For especially delicate work, such as treating incisions with adhesive, fine modelling etc.

Brush Size	Length	SKU	Qty
1/8"	6.25"	701714	1

Complete Cosmetician Kit

By far our best selling kit, the Complete Cosmetician Kit is different from any other kit Dodge has to offer. It contains a combination of cosmetics for almost all the different lines that are produced. Three of Dodge's expert cosmetic demonstrators selected each component of the kit based on their own preferences and each shades popularity as indicated by sales volume.

Performance Highlights:

- You'll find just about everything you need to handle any case in this kit.
- Available in two different versions. Cosmetic shades to suit light and darker complexions.
- Both kits contain: three 2 oz Kalon Creams, six 1 oz Kalon Pigments, eight 1/2 oz Kalochromes, five 1 oz Aquachromes, three 1 oz Perma Liquids, two 2 oz waxes, a 1/2 oz nail varnish, two 1/2 oz soft rouges, six brushes, a forceps, a spatula and a pair of scissors.

Product	SKU	Size	Qty
Lighter Complexion	690010	17" x 14.5" x 3.5"	1
Dark Complexion	690012	17" x 14.5" x 3.5"	1

Junior Kalochrome Kit

This compact professional kit gives the embalmer a practical working assortment of essentials contained in a neatly organised, durable carrying case. A handsome, economical cosmetic unit, adequate for most standard cosmetic applications.

Performance Highlights:

- Available in two different versions. Cosmetic shades to suit lighter and darker complexions.
- Both kits contain: 14 shades of 1/2 oz Kalochrome Cream, two 2 oz waxes, two 2 oz Kalochrome Powders, a 2 oz White Kalon Cream, two 1/2 oz rouges, three brushes and a spatula.

Product	SKU	Size	Qty
Lighter Complexion	650804	17" x 14.5" x 3.5"	1
Dark Complexion	650820	17" x 14.5" x 3.5"	1

Perma Safe Cosmeitc Bib

Use to protect the clothing of deceased, when cosmetics need to be applied after dressing or coffining procedures have already been completed. An excellent item to have to prevent accidental staining of clothing when performing cosmetic applications.

Airbrush System Compressor Set

This system operates with a gentle air-flow pressure of only 2.1 bar (appr. 30 psi). It is also exceptionally quiet in operation. For mobile work, the compressor can also be powered with the rechargeable battery pack that is included. The airbrush gun is a double action gun where the trigger controls both airflow and material. Other airbrush guns can also be connected to the compressor. This set includes the compressor, airbrush gun, battery pack and bag.

Instruments

Separators, Dissectors & Directors

Double Ended Separator

- Stainless Steel.
- Available in two versions.
- Used for all standard dissection procedures.

Flexible

SKU: 705700

Rigid

SKU: 705701

MacDonald's Separator

- Stainless Steel.
- Ideal for use in all derma surgery applications.
- Well suited for raising delicate arteries and veins.

SKU: 705705

White Nylon Separator

- 6" nylon separator.
- Ideal for cutting against when incising arteries and veins.

SKU: 705715

Curved Separator

- Stainless steel.
- Curved dissector tip for delicate work.
- 6" curved separator.

SKU: 705707

Freer's Elevator

- Stainless steel.
- Has many embalming room uses.
- Non-slip convex and concave, Freer's elevator tips on a sure grip handle.

SKU: 702258

Grooved Vein Director

- Stainless steel director/grooved fascia needle.

SKU: 702209

Probe Point Vein Director

- Stainless steel probe point director/grooved.

SKU: 702217

Aneurysm Needles, Hooks & Elevators

Aneurysm Hook

- Blunt point.
- Available with or without eye of ligating operations.
- Quality stainless steel instrument.

No Eye

SKU: 703338

With Eye

SKU: 703339

Aneurysm Hook/Cradle

- Specially designed handle cradles vein or artery during incision and intubation.
- Has separator/ director tip.
- Quality stainless steel instrument.

SKU: 703389

Aneurysm Hook Smooth Grip

- Small right-angled hook, concave handle.
- Tip formed for modelling, separating and dissecting.
- Quality stainless steel instrument.

SKU: 703397

Aneurysm Hook Probe Handle

- Large curved hook. Heavy corrugated handle.
- Multi purpose tips at both ends.
- Quality stainless steel instrument.

SKU: 703355

Aneurysm Needle

- Extra heavy handle, small tip with eye.
- Broad flat separator.
- Chrome plated.

SKU: 703348

Expander/Aneurysm Needle

- Expander and aneurism needle.
- Quality stainless steel.

SKU: 702274

Please note that instruments are not shown at actual size.

Instruments

Forceps

6 1/2" Forcep Dissector

- One of the most versatile forceps ever designed for embalming use.
- Idea for delicate eye and restorative work.
- Has multi-purpose dissector handle.

SKU: 702597

8" Curved Tip Forceps

- Companion instrument to the 6 1/2" forceps.
- Made for more rugged usage in autopsy operations, mouth and nostril cleaning, inserting eye caps and mouth formers.

SKU: 702654

Blunt Dissecting Forceps

- Stainless spring steel construction.
- Available in 4 different lengths.

6 cm/2.25" Curved Dieffenbach Clamps

- Ideal for clamping arteries without causing damage to the vessel.
- Particularly useful when clamping the arteries of the cranial vault when embalming autopsied cases.

SKU: 702617

6 cm/2.25" Straight Dieffenbach Clamps

- Ideal for clamping arteries without causing damage to the vessel.
- Particularly useful when clamping the arteries of the cranial vault when embalming autopsied cases.

SKU: 702614

Instruments

Fixation Forceps

Designed to hold metal arterial tubes in place, while under pressure, these forceps simplify injection procedures during the embalming of both straight and autopsy cases. Available in differing sizes, some of these forceps feature angled heads which aid in clamping arteries in difficult to reach areas.

Three Hole Fixation Forceps

- Stainless Steel.

SKU: 702894

Size: 2.35 mm, 4.75 mm & 3.15 mm Ø

Two Hole Fixation Forceps - (Carotid/Large size)

- Stainless Steel.

SKU: 702564

Size: 6.0 mm & 4.5 mm Ø

Two Hole Fixation Forceps - (Medium/Small size)

- Stainless Steel.

SKU: 702565

Size: 4.0 mm & 3.0 mm Ø

Two Hole Fixation Forceps - (Baby/Maxillary size)

- Stainless Steel.

SKU: 702566

Size: 2.0 mm & 1.5 mm Ø

Two Hole Fixation Forceps - (Large/Small size)

- Stainless Steel.

SKU: 702555

Size: 1/4" & 1/8" Ø

Safety Note: When using these forceps to hold tubes in place while embalming a straight case, a ligature should also be used to act as an additional safety measure and also allow for the vessel to be tied off after injection to prevent leakage.

Metal Arterial Tubes

Manufactured in the United Kingdom to the highest standards, these tubing mount arterial tubes follow a traditional design and are produced from quality chrome plated brass. They are free of any knurls or occlusions which make them easy to clean and maintain and ensure constant flow while in use. They attach directly to the tubing from the injection equipment by simply pushing the hub of the arterial tube into the hose.

SKU: 707714

As well as individual arterial tubes, we are able to provide complete sets of tubes for your convenience.

Instruments

Metal Taper Fit Arterial Tubes

These high quality arterial tubes represent a new concept in tube design. They allow for a quick connect/disconnect system without loss of bore or flow. The selected arterial tube is attached to the female connector by simultaneously inserting and twisting. The female connector is permanently attached to the injection source. For other metal injection tubes, plastic injection tubes or hypodermic trocar kits that do not have taper fittings the male taper adaptor can be used in conjunction with Vinyl 14H injection tubing (SKU: 761980) and a plastic connector (SKU: 709317). When the female connector is not in use, a plug is available to protect against dirt entering the socket, it also provides protection against leakage of fluid should the stop tap fail or the female socket be left on a countertop or instrument trolley. As with all the arterial tubes, they may be purchased individually or in sets as detailed below.

Metal Threaded Hub Arterial Tubes

Designed to work exclusively with the Dodge range of embalming machines. These high quality metal arterial tubes come with threaded hubs so that they can be screwed directly into the stop tap of the injection line. For ease of use, we are able to provide male and female luer lock adaptors which allow arterial tubes to be removed and changed by the operator in seconds. With the luer lock adaptors, the male adaptor is screwed into the stop tap of the injection line, where it remains. A female adaptor is then screwed onto the threaded end of every arterial tube to facilitate quick and easy connection and disconnection. As with all Dodge arterial tubes, they may be purchased individually or in sets as detailed below.

Drainage Forceps

- Practical drainage simulator, particularly useful in the removal of heavy, clotted blood.
- Expands the vein to maximum diameter, yet takes up little space within the vessel itself.
- Stainless steel.
- Working length of 7".

7" working length

SKU: 702837

Drainage Tubes

Designed to facilitate the removal of blood from the venous system while arterial injection takes place, these high quality drainage tubes help to remove superior amounts of drainage from the deceased. With high quality slip hubs, these drain tubes can be connected to flexible plastic tubing so that drainage can be diverted to a covered receptacle or table drain for disinfection and disposal. This system of closed drainage helps to reduce exposure of the operator to potential sources of infection and maintain the highest standards of cleanliness in the embalming room. (OD - Outside Diameter).

Multi-Slot Drain Tubes

- Working length approximately 9".
- Dual slots aid in achieving a superior volume of drainage.
- Easily disassembled for cleaning.

Instruments

Injection/Drainage Tubes

A low cost set of injection and drainage tubes, designed to be used when a flexible plastic injection tube is preferred to metal ones. These tubes are not designed to withstand high pressures. In use they should be ligated into the artery being injected. It is not recommended that these tubes be held in place with metal fixation forceps.

Post Mortem Blades/Handles

For use with the popular PM40 or PM40B blades, the blue handle is the standard handle for post mortem or dissection use while the silver, deluxe handle is designed to withstand intensive use and autoclaving. For infectious cases, or improved safety in the post mortem room, there is a disposable option, where by the whole unit, blade and handle can be incinerated after use.

Instruments

Hypodermic Needles

The MazWell Group is pleased to offer a full range of hypodermic needles which can be used for a variety of different tasks in the embalming room. All of the needles will function with luer lock syringes for added safety when injecting strong preservative, cauterant or tissue building chemicals. Images not shown to scale.

Syringes

Hypodermic Trocar Set

This quality hypodermic trocar set will allow the operator to treat areas of the body not receiving sufficient fluid during arterial injection due to poor circulation, circulatory disruption or trauma. With its luer lock fittings, the operator can use either the supplied trocar or any luer lock hypodermic needle. The luer lock fitting offers increased protection from chemical sprays as the trocar or hypodermic needle is securely fitted to the valve and unable to detach itself under higher pressures.

Performance Highlights:

- Allows for simple and fast treatment of areas of the body not receiving sufficient arterial fluid.
- Particularly useful for treating flaps of autopsy cases.
- Luer lock fittings secure trocars and hypodermic needles in place and protect against chemical splashes.
- Valve handle accepts hypo trocars or luer lock hypodermic needles.

SKU: 706318

Hypodermic Trocar Adapter

Female to male adapter - 12/32" to 5/16". This connector allows the Hypodermic Trocar to attach directly to the stop-tap of any Dodge Embalming Machine for added safety when injecting fluids under pressure.

Replacement part for the discontinued Hypodermic Trocar Stop Tap Connector (701046).

SKU: 706320

Chuck Action Trocar Handle

Designed to provide increased grip on the trocar shaft for the embalmer when performing aspiration procedures. The implement will increase the embalmers control and help to prevent slipping.

SKU: 706098

Trocar Cleaning

Comprising one nylon brush, one bronze brush and a collapsible handle, this unit will help you to ensure your trocar remains clean and disinfected between each case.

Instruments

Evolution Trocar

Developed in collaboration with Instrument Design & MFG. and the research team at The Dodge® Company. The Evolution Injector™ combines the Chemical Cavity Injector and Comfort Grip Trocar™ into one new product. Designed to bring the process of cavity injection down to one hand for advanced manoeuvrability.

Performance Highlights:

- Sleek, lightweight Delrin and durable stainless steel design.
- Quick release bottle attachment for easy bottle insertion and removal.
- Comes with one 7" adapter.
- Additional adapter available separately.

Evolution Injector™ (7" adapter included)

Comfort Grip Trocar

The Dodge® Comfort Grip Trocar has a uniquely machined handle for easier use and improved grip. Offering an alternative to traditional trocars this features the first truly ergonomic grip on the market. The light weight plastic handle sits comfortably in the palm of the hand and allows the operator to firmly grip the trocar with the whole hand, not just the finger tips. Diameter is 5/16".

18"

SKU: 035002

Trocar & Stilettes

Dodge® Trocars are supplied with cap and points and are made to the highest standard. There are 5 sizes available as well as an infant trocar which is also supplied with a cap and point. Stilettes are available for 18", 16" and 14" trocars.

Post Mortem Aspirator UK Model

This chrome-plated unit has been completely redesigned with a removable chamfered filter head and hexagonal multi diameter tubing mount.

SKU: 701174

Non-Clogging Post Mortem Aspirator

Drains cavities completely. The head can be removed for thorough cleaning. Works with tubing for Waterless/Hydro Aspirator.

SKU: 701151

Throat/Nasal Aspirator UK Model

A high quality chrome-plated unit with a multi diameter tubing mount and a removable tip for ease of cleaning.

SKU: 708810

Spare Tip

SKU: 708811

Nasal Tube

Essential for purging cases. Evacuates liquid from nasal cavities and the throat. Works with tubing for Waterless/Hydro Aspirator, SKU 761992.

SKU: 708800

‘Y’ Tube

A quality chrome plated brass injection tube. This device permits the injection of two arteries simultaneously.

SKU: 709312

Instruments

Bulb Syringe

A quality rubber bulb syringe with metal valves, which can be used for the injection of fluids into the arteries or cavities of the deceased or to decant fluid from larger containers to smaller ones. Note: This is normally used with a filter based sinker, which can be purchased separately.

Bulb Syringe

UK High Pressure Stop-Tap

To control the flow of fluid from the injection equipment (high pressure), this connector features ball operation to ensure no leakage from the connector when the tap is closed. Used for the EM and APC embalming machines.

SKU: 704855

Dodge® Trocar Buttons

SKU: 740019
Box of 144

Multi-Trocar Buttons

Multi-Closure buttons to close openings caused by I.V. lines, hypodermic incisions, trocars, tracheotomies, and feeding tubes. Compatible with 2-prong trocar button applicator.

SKU: 750550
Box of 50

Trocar Button Applicator

- Handle is made from stainless steel.
- Because of handle design it will not roll down embalming tables or off counter tops.
- Double pronged end is compatible with most styles of trocar buttons available.

SKU: 701129

A-V Closure

- Used to seal the anus and/or vagina.
- The A-V Closure makes sealing orifices easier.
- Insures against both odours and liquid leakage.
 - Won't tear tissues.
- Won't wick moisture out of the body like cotton will.
 - Can be used with Q-S Powder or Sanisorb.

SKU: 750122
Each

Needle Injector

- Easier to squeeze than the earlier, chrome model.
- More durable.
- Larger, more comfortable finger rings.

SKU: 703489

Needle Injector Handle

Makes life easier for people with small hands to operate the needle injector.

SKU: 703496

Injector Needles

- Provides secure closure of the mouth.
- Regular wire.

SKU: 820019

Pack of 144

Magnetic Needle Rack

This attractive magnetic needle rack protects the operator from being stabbed in the fingers while hunting through draws or cupboards for suture needles. It is much more hygienic than sticking needles into polystyrene or sponge blocks, which can prematurely dull the needle tip. This unit is easily cleaned and can be mounted on the counter top or screwed onto the wall after removing the rubber feet. The unit comes with pre drilled holes, however three screws will be required.

Magnetic Needle Holder

SKU: 704000

Complete with cover

Needle Holder Cover

SKU: 704001

Tissue Reducer

The Tissue Reducer dries moist tissue, smoothes out wrinkles, recreates obliterated facial characteristics and reduces swelling from oedematous conditions or over-injection of arterial fluid by the external application of heat. It delivers just the right amount of heat for treating human tissue and maintains a constant ideal temperature even after continual use over cold tissue. The tips have been designed so that the desired effects can be achieved quickly and with a limited number of passes. A note of caution however, excess contact with a reducing iron will tend to leatherise the treated area.

Performance Highlights:

- Reduces swelling caused by injuries or over injection of arterial chemicals.
- Recreates facial lines.
- Fitted with insulated handle and supplied with one large and one small interchangeable tips.

Tissue Reducer (240v UK & European)

SKU: 705605

Disposable Cautery Pen - Fine Tip, High Temp (174 mm)

Disposable cautery pens offers a cost-effective and practical solution for cauterising in minor surgery clinics.

Disposal

- Fiab Disposable Pens should be disposed of with general waste according to local regulations. As the device may be contaminated, the device should be disinfected before disposal.
- In order to avoid accidental heating of the cautery, the tip should be cut with a pliers and covered with the supplied cap.

Features

- Easy to handle.
- Powered by an internal, long-life battery.

Specifications

- Operating temperature: 600°C (Low Temperature), 800°C (Medium Temperature) or 1,200°C (High Temperature).

SKU: 720200

Thread Passer & Spool

- An easy method for passing thread under a vessel to be ligated. The probe is passed under the vessel and the proper length of ligature is withdrawn and cut on the built in blade.
- Helps to prevent contamination of clean ligature by dirty gloves.
- Prevents too much thread being cut for manual ligation of vessels.

Set

SKU: 705558

Includes: Thread passer, 2 spools & 2 blades.

Replacement Spool

- Braided five cord thread.

SKU: 761346

Size: 1 oz

Replacement Blades

SKU: 705566

Pack of 3

Wire Snare (Threader)

SKU: 705574

Thread Station

- Maintains cleanliness and professionalism in your embalming room.
- Removes the need to handle spools of ligature with contaminated gloves.
- Keeps ligatures in their place.
- Allows for the easy removal of proper lengths of ligature.
- Allows the technician to use more than one kind of ligature (e.g heavy ligature for closing autopsy incisions, thinner ligature for cosmetic sutures).
- Units not supplied with ligature.

Equipment

Are you thinking of updating your embalming room or do you simply need to replace some out dated equipment? MazWell® has the answers your looking for!

Let The MazWell® Group help you. With over a hundred years of experience, we have invested considerable time and effort in selecting products that make life easier. In simple terms, products chosen by embalmers, for embalmers.

From embalming tables to body hoists, removal stretchers, instrument trolleys and many other invaluable items we are pleased to be able to fulfil any requirements that you may have. If there is an item of equipment that you need and it can't be found in the catalogue, please contact us. We are only too happy to help, and if we can find it, we will supply it for you.

In recent years there has been much emphasis placed on health and safety in the work place and in particular the control of environments deemed to be potentially hazardous to the health of the workforce. Control of potential sources of infection, good standards of hygiene and control of substances hazardous to health. In planning a safe and practical embalming room, there are many factors that need to be considered including use of floor space, ventilation, work surfaces, tables, safe storage of the deceased and containment of chemicals and storage. We can help. Whether you just want to consider your options or a refurbishment is well overdue and you need it as soon as possible, we are well placed to help. Typically we offer a six to eight week lead time on most of our capital equipment and delivery to your facility direct from the manufacturers, we can meet your demands in realistic time frames. Put our experience to work for you, we can help in all aspects of redesigning and equipping your facility and ensuring that it will more than meet its requirements for many years to come.

MazWell® Single Pump Unit

This is an economy unit, housed in a stainless steel case. It has a pressure gauge and twin bleed valves to control pressure and vacuum.

SKU: 709406

Size: 20.2 x 20 x 18.3 cm

Weight: 3.35 kg

Vinyl Tubing

SKU: 761980

Size: Per metre
(sold separately)

MazWell® Twin Pump Unit

This unit is the ultimate of its type. It is housed in a stainless steel case and has twin motors, each with independent gauges, pressure and vacuum controls. This allows for continuous and simultaneous injection and drainage as each function is controlled by its own motor.

SKU: 709411

Size: 23 x 27 x 18.3 cm

Weight: 5.3 kg

Vinyl Tubing

SKU: 761980

(sold separately)

User Guidelines

Dodge® Embalming Machine with Automatic Pressure Control

The Dodge® Embalming machine with Automatic Pressure Control is a breakthrough in the control offered to the embalmer, when injecting arterial fluid into the deceased. With unique features, The Dodge® APC Embalming machine can be relied upon to produce consistently excellent penetration and distribution of embalming fluid.

Using the machine is simple and we would recommend taking a few moments to become familiar with its operating features. The Dodge® Embalming machine with APC is designed to control the flow rate of embalming fluid and automatically adjust the pressure to ensure the rate of flow is maintained. The machine also offers both direct and pulsating injection. The machine features two gauges to show the level of fluid in the tank as well as the rate of flow. There is also a dial on the front of the machine to adjust the rate of flow.

Start by unpacking the machine and placing it in a convenient location in your embalming room. For ease of operation, we suggest either a countertop near to an electrical and water supply or a mobile trolley. Once the machine is in the correct location connect the electricity supply and tuck any excess cable out of the way behind the machine.

The machine features a mix cycle, which will mix your selected fluid without needing the injection hose to be attached. This can be very useful if you wish to prepare your chosen fluid before attaching the injection hose. The machine can be fitted with a clip which holds the hose, which can be fitted to the front of the machine, or two cleats on the right hand side on which the injection hose can be coiled round when not in use.

Prior to first use, we recommend trying the machine with some plain water, to become used to its working action. Remove the lid of the fluid reservoir and add two or three litres of cold tap water. turn the dial on the left hand side of the machine to 'mix'. If you look inside the tank you will see that the machine circulates the fluid in the tank to mix all chemicals together. At this time please ensure that the injection hose is attached. now, pointing the injection hose into the fluid reservoir, turn the on/ off dial to direct injection and gently open the flow dial by turning it from left to right.

Once you have set the desired rate of flow, the machine will do the rest. If any blockages are encountered, that reduce the rate of flow, the machine will increase the pressure to ensure the desired rate of flow is maintained. With this a note of caution should be added. The diameter of both the artery being injected and the injection tube fitted will impact the rate of flow at the end of the machine hose. If the machine senses any restriction in the rate of flow, it will increase the pressure. If the injection tube is changed and the flow rate remains the same, the pitch of the machine may change as it works to maintain the same rate of flow through a much smaller diameter tube. Due to the high quality components and workmanship supporting this machine, the pump should in no way be damaged, however some operators may find it unnerving. Also, the operator may be surprised at how quickly delicate facial tissues embalm using tiny maxillary tubes if the flow rate has not been adjusted.

Another useful addition to the features of this machine is the pulsation setting. This allows fluid to be delivered into the circulatory system one "spurt" at a time. This "spurt" is similar to the manner in which blood is pumped around the body by the heart. The pulsing mechanism allows for deeper and better diffusion of arterial fluid around the body and assists in clearing cases where discolouration is evident, and helps ensure more thorough preservation on long term or shipping cases. throughout the embalming procedure, the flow of the injected arterial solution can be adjusted and the injection can be switched between direct or pulsation. The operator really is in control of the entire procedure internally and externally.

When injection has been completed, the machine should be washed out with fresh water, to prevent the arterial chemicals damaging the internal components. Once you have completed the injection, any fluid remaining in the tank should be drained away before fresh water is added for rinsing purposes. Once the hose has been rinsed clean, it can be used to rinse the fluid reservoir. When doing this, remember to turn the flow down to prevent excessive splashes. If any residues remain Dis-Spray and Webril towel or disposable paper will effectively remove it. The outside of the machine can also be cleaned in this way.

When filling the machine, avoid excess splashing of chemicals or diluted solutions. Should excessive foaming become a problem, a couple of sprays of Dis Spray to the foam will reduce it without any adverse effect to the fluid.

The Dodge® Embalming Machine - Automatic Pressure Control

The next Generation of Dodge® Embalming machines. With the advanced technology of Automatic Pressure Control capability that automatically self-adjusts to manage various sources of vascular resistance.

Performance Highlights:

- Ultra quiet operation while injecting.
- Built in rate of flow meter.
- Choose between pulsation or continuous injection.
- Complete stainless steel cabinet with Dodge quality components and construction along with a comprehensive Dodge warranty.
- Exterior cabinet dimensions are: H14" x W17" x D19".
- Pump is industrial duty with magnetic drive.
- Quick release injection tubing. Easy to detach, drain and coil for storage.
- Auto-mix cycle mixes your solution without even requiring the hose to be attached.
- Easy access to the in-line filter.
- Recessed carrying handles allow the machine to be moved easily.
- Hose complete with adapter and stopcock to accommodate threaded or luer-lock arterial tubes.

5. Two Quick Disconnects - Female for Dodge Machine

SKU: 924325

6. Two Quick Disconnects - Male for Dodge Machine

SKU: 924326

User Guidelines Original Dodge® Embalming Machine

The Original Dodge® Embalming machine is a breakthrough in the control offered to the embalmer, when injecting arterial fluid into the deceased. With all the features that every embalming machine should have, but none do, the Original Dodge® Embalming machine can be relied upon to produce consistently excellent penetration and distribution of embalming fluid.

Using the machine is simple and we would recommend taking a few moments to become familiar with its operating features. The Original Dodge® Embalming machine is designed to control pressure and flow simultaneously as well as offering both direct and pulsating injection. The machine features two gauges to show the level of fluid in the tank as well as the rate of flow. There are also two dials located on the front of the machine to control the rate of flow and the pressure.

Start by unpacking the machine and placing it in a convenient location in your embalming room. For ease of operation, we suggest either a countertop near to an electrical and water supply or a mobile trolley. Once the machine is in the correct location connect the electricity supply and tuck any excess cable out of the way behind the machine. The machine features a mix cycle, which will mix your selected fluid without needing the injection hose to be attached. This can be very useful if you wish to prepare your chosen fluid before attaching the injection hose. The machine can be fitted with a clip which holds the hose, which can be fitted to the front of the machine, or two cleats on the right hand side, which the injection hose can be coiled round when not in use.

Prior to first use, we recommend trying the machine with some plain water, to become used to its working action. Remove the lid of the fluid reservoir and add two or three litres of cold tap water. Turn the dial on the left hand side of the machine to 'mix'. If you look inside the tank you will see that the machine circulates the fluid in the tank to mix all chemicals together. At this time please ensure that the injection hose is attached. Starting with the pressure control dial, turn it gently as far to the left as possible, to ensure that the pressure is at the lowest setting.

With the pressure control at its lowest setting, now turn the flow control dial as far to the right as possible. The flow will now be at its lowest setting. You can now set the rate of flow and pressure independently of one and other to your desired setting. We suggest setting the pressure first, as this increases the rate of flow. Once the desired pressure has been set, open the flow valve and watch as the pressure decreases. You can then turn the pressure up or down and adjust the flow as you wish. Because of the design of this machine you can embalm with any combination of pressure or flow. For bodies dead for a short period of time, a moderate rate of pressure and flow will produce exceptional results. For bodies dead for longer periods or those that are circulation resistant higher rates of pressure and lower rates of flow will produce distribution and penetration of arterial fluids previously thought impossible.

Another useful addition to the features of this machine is the pulsation setting. This allows fluid to be delivered into the circulatory system a "spurt" at a time. This "spurt" is similar to the manner in which blood is pumped around the body by the heart. The pulsing mechanism allows for deeper and better diffusion of arterial fluid around the body and assisting in clearing cases where discolouration is evident as well as helping to ensure more thorough preservation on long term or shipping cases.

Throughout the embalming procedure, the pressure and flow of the injected arterial solution can be adjusted and the injection can be switched between direct or pulsation. The operator really is in control of the entire procedure internally and externally.

When injection has been completed, the machine should be washed out with fresh water, to prevent the arterial chemicals damaging the internal components. Once you have completed the injection, any fluid remaining in the tank should be drained away before fresh water is added for rinsing purposes. Once the hose has been rinsed clean, it can be used to rinse the fluid reservoir. When doing this, remember to turn the pressure and flow down to prevent excessive splashes. If any residues remain after rinsing, Dis-Spray and Webril towel or disposable paper will effectively remove it. The outside of the machine can also be cleaned in this way.

When filling the machine, avoid excess splashing of chemicals or diluted solutions. Should excessive foaming become a problem, a couple of sprays of Dis-Spray to the foam will reduce it without any adverse effect to the fluid.

The Original Dodge® Embalming Machine

Finally an embalming machine you can depend on. This one has all of the features that every machine should have, but none do!

Performance Highlights:

- Inject at low pressures, if that's your preference, or use high pressures to overcome blockages.
- Built in rate of flow metre.
- Choose between pulsation or continuous flow.
- Completely stainless steel cabinet. Dodge® quality components and construction.
- Pump is industrial duty with magnetic drive.
- Quick release injection tubing. Easy to detach, drain, coil and store in the fluid reservoir or use the hose clip on the front of the machine.
- Auto-mix cycle mixes your solution without even requiring the hose to be attached.
- Recessed carrying handles allow the machine to be moved more easily.
- Hose complete with adapter and stopcock to accommodate threaded or luer-lock arterial tubes.
- Easy access to in-line filter.
- Convenient hose holder cleats on the side of the machine.

8. Injection tube quick disconnect.
9. Rubber feet.
10. Tank cover.
11. Handle.

User Guidelines Dodge® Waterless Electric Aspirator

The Dodge® Waterless Electric Aspirator is supplied with both suction and discharge hoses and a 5/16" diameter 18" Slaughter Trocar. Set up is easy and the machine can be ready for use in a few moments.

Place the machine on a trolley or worktop close to the drain or sluice that it will discharge into. There should also be a power point near by. Connect the discharge hose to the port marked 'D'. The machine is supplied with a weight that should be pushed onto the discharge hose, about six inches above the end of the hose that will rest in the drain, sink or sluice. This weight will help to keep the discharge hose in place. With new embalming rooms or refurbishment projects, it may be best to have an additional drain pipe installed next to the embalming table or station so that the machine may discharge directly into the sewer line. Next connect the suction hose to the port marked 'S'. When in use the discharge hose may jump about slightly and we would advise testing the machine first with some water to become familiar with the action of the pump.

The unit can be placed on a worktop, trolley or even the floor. The position of the machine will in no way affect its performance. Testing has found that the unit will work very well if left on the floor next to the embalming station, sluice or drain and being operated by the embalmer with his or her foot. At this time, it is worth noting that some thought should be given to the position of the machine and the length of suction and discharge hoses. The aspirator is supplied with six metres of hose, that can be cut to suit the individual situation of the purchaser. We would recommend allowing two metres of hose for the discharge and four for the suction. If the machine is to discharge into an embalming station with a strainer basket, or a sluice that has a grating for a bucket, a cable tie can be used to hold the hose in place and avoid it falling from place. If the sluice in your embalming room is a modified toilet with the seat still in place, insert the discharge hose and close the seat to guard against splashes and prevent the hose from falling out.

It may take a few days to get used to the action of the machine, however after a day or two we are sure that you will wonder how you ever managed without it. For those who currently use a Hydro Aspirator, the process of aspiration is exactly the same except for the reduction in the amount of water used in the embalming room. For those who are currently using a vacuum pump and aspiration jars, you will need to monitor the suction hose and the material entering it as you work through the cavities of the body. Our testers agreed that the best procedure is to start with atrial drainage and then relocate the trocar when no further fluid enters the suction hose. Aspiration is then performed until no more material enters the suction hose. While aspirating it is advisable to periodically rinse the trocar and hoses with a disinfectant solution. This helps to prevent a build up of material in the trocar, hoses and pump head and also helps to disinfect the material discharged into the sewer system during the aspiration process.

After the aspiration is completed, clean disinfectant solution should be run through the suction and discharge hoses and the outside of the hoses and the machine should be cleaned with a clean cloth, which has been dampened with disinfectant. Periodically you may want to draw disinfectant solution through the machine and let it sit for a while before flushing through with clean water. This will help to ensure that your machine remains in top condition. The outside of the machine can be wiped down and even sprayed with disinfectant, however it should never be immersed in liquid and must be disconnected from the mains electricity first.

There is only one part of the machine that can be replaced, the tube inside the pump head and this can be undertaken by the embalmer. The screws in the pump head are simply undone, the old tube removed, the new tube inserted and the screws replaced.

The suction generated by the machine is ample for aspirating the most difficult case and the procedure is more pleasant. Embalmers will appreciate not having to handle aspirated material, or clean and disinfect dirty aspiration jars. They will also be spared the problems when Hydro Aspirators block or require dismantling for cleaning and maintenance. There are significant time savings made, not having to deal with aspiration jars or stopping half way through the aspiration procedure to empty jars due to high volumes of fluid in the cavities. The Waterless Aspirator takes the labour out of aspiration and assists the busy embalmer in maintaining the highest standard of embalming practice as well as personal and environmental hygiene while working.

The Dodge® Waterless Electric Aspirator

The Dodge® Waterless Electric Aspirator is the first electric aspirator available to the funeral profession which utilises the technology of the peristaltic pump.

The peristaltic pump, which is primarily used in the medical field in dialysis and heart/lung bypass devices, eliminates the need for aspirated materials to pass through a motorised mechanism or impellor. The aspirator creates a vacuum by compressing flexible tubing, using a series of three rollers which rotate in a housing at a high rate of speed. This allows the isolation of the aspirated material from any moving part of the mechanism, thus eliminating the possibility of contamination or clotting, a common problem with all other electric aspirating devices.

By creating the vacuum necessary for aspiration through electricity, The Dodge Waterless Electric Aspirator eliminates the need for large volumes of water to be wasted during the aspirating process. The device also eliminates the need for the operator to handle the aspirated material collected in glass or plastic aspiration jars. The risk of these jars imploding or being dropped is also removed. Material removed from the deceased during the aspiration process is simply discharged directly into the sluice, foul sink or drain without the operator ever being exposed to it. This machine has been thoroughly tested and will work all day every day, year after year with no need for time consuming maintenance or risk of mechanical failure.

This machine will allow for thorough and easy aspiration of the deceased, while helping to improve the hygiene standards in the embalming room and protecting the embalmer from exposure to potentially harmful and infectious material.

Performance Highlights:

- Uses quick disconnect fittings for both intake and discharge lines, ensuring ease of use, cleaning and storage.
- Stainless steel motor housing and high impact plastic pump housing provide durability and a professional appearance.
- Supplied with a trocar and 6 metres of suction/discharge hose re-inforced tubing 12.5 mm ID, OD 18.5 mm.
- One year warranty for parts and labour and two year warranty for the motor.
- Use in areas where poor water pressure prevents the use of a Hydro Aspirator.

MazWell® 5 & 10 Litre Calibrated Pressure Tanks

Here at MazWell® we are pleased to introduce to you a new range of 5 and 10 litre pressure tanks for arterial injection. These tanks offer enhanced features to support the busy embalmer in their work. A sturdy base ensures that the tank will not tip over either when empty or full, and the threaded lid makes it easier to fill with chemicals or water without spills or leaks. The tank is also fitted with our chemical resistant 14H injection and drainage hose and a stop tap. A back flow valve ensures that no liquid can ever enter the motor pump, even if the tank is over filled. We have also featured a manual pump and pressure gauge so that the pressure tank can be used with or without an electric motor pump. This feature is particularly valuable for the busy trade embalmer or in cases of mechanical failure. This compact and sturdy unit will offer years of trouble free service and can be relied upon in the busiest of facilities.

Performance Highlights:

- Impact resistant, calibrated polyethylene pressure tank.
- Supplied with all required injection and pressure hoses.
- Injection line fitted with stop tap to control fluid flow.
- Fitted with pressure relief valves, which doubles as safety valve when in use.
- 5 litre ideal for use in locations where space is at a premium.

Hydro Aspirator

The finest Hydro Aspirator on the market. Equipped with a sight glass to monitor fluid flow and an automatic vacuum breaker to prevent contamination of the water supply. This unit can be completely disassembled for cleaning and disinfection, which we recommend take place regularly to prevent contamination of cases. To provide adequate vacuum pressure for aspiration procedures a water supply of 60 psi is recommended.

Dodge® Body Rests

Performance Highlights:

- Sold in sets of four for use at the heels, buttocks, shoulders and under a head block.
- Less obstruction to waste drainage.
- Facilitates hypodermic treatment to the backs of autopsy cases.
- Non-slip rubber feet.
- Redesigned so that they will no longer hold water after immersion while cleaning.
- Solid anodized aluminium construction.
- Now with stronger, thicker posts inside the rubber feet.
- Resists breakage due to heavy use.
- Raises the body 2" above the table surface.
- Aids circulation over the posterior surfaces of the body.

Body Rest Set

Lower Body Positioner

Designed to be an embalmers second pair of hands in the embalming room. The lower body positioner assists the embalmer in all aspects of preparation of the lower aspects of the body including packing, wrapping and dressing.

Performance Highlights:

- Helps the operator during the embalming process, as well as during dressing.
- Rugged construction - made of high impact plastic.
- minimises points of contact between the body and embalming table. Assists with fluid distribution.
- Both table and positioner stay cleaner since waste flows freely into the drain.
- Lightweight and easily sanitised.

SKU: 999900

Dodge® Arm Positioners

Performance Highlights:

- Creates a truly natural looking placement during the fixation of the arms and hands.
- Chrome plated steel. Extends up and down to accommodate all body sizes.
- Bases covered in rubber.
- Easy to clean and disinfect.
- Can overcome the hand that refuses to stop sliding down.
- Works equally well under the legs.
- Can be used to help drain oedematous limbs.
- Sold as a pair.

SKU: 910154
Pair

Dodge® Cross Chest Arm Support

Performance Highlights:

- Allows for easier cleaning of the table, since these arm rests do not sit on the table.
- Adjusts to the height of the arm by loosening or tightening the strap.
- Straps can be removed, washed and disinfected.
- Replacement straps are available.
- Stainless steel portion is easy to clean and sterilise.
- Less expensive than two head rests (which are sometimes used to position the arms).

Infiniti Compact

A new addition to the Infiniti family, providing discreet fly catch, for customer facing applications or areas with limited wall space.

Performance Highlights:

- Decorative and compact design, for front of house applications.
- High fly catch efficacy, comparable with traditional 30w fluorescent models.
- Swing open front guard, for quick and simple tool free servicing, without the need for ladders.
- Unique slim LED source for compact storage and transportation.

SKU: INF003

Infiniti 2

The Infiniti-2 LED insect light trap is the next-generation commercial fly killer, built for businesses that demand energy efficiency and sustainability. Powered by patented LED strips positioned behind the glueboard, it achieves exceptional fly catch efficacy while using up to 67% less power than 45w fluorescent fly killers—making it a smart, cost-effective pest control solution. Its slimline design ensures discreet installation in restaurants, food factories, warehouses, and retail environments, while tool-free servicing allows glueboard replacement in under 30 seconds.

Designed with common glueboards and LED strips across the Infiniti range, consumable management is simple and cost-friendly. With a 3-year LED lifespan, lower energy bills, and reduced environmental impact, the Infiniti-2 LED is the professional choice for energy-efficient insect monitoring and commercial pest control.

SKU: INF002

Infiniti Aqua

A new addition to the Infiniti family, incorporating all of the premium features of Infiniti 2, with IP rating appropriate for hose down applications.

- IP rated for hose down applications.
- High fly catch efficacy, comparable with traditional 45w fluorescent models.
- Compact UV source for a slim, compact unit.
- Simple servicing with swing down front guard.

The Multilevel XL300

The Multilevel XL300 funeral trolley has been designed to carry out safe and dignified removal of larger bodies.

The fold down locking sides greatly increase surface area allowing body mass to be contained. This trolley can also be fitted with our easy-out system which eliminates the need to lift when exiting your vehicle. The XL300 also benefits from our Roll in Roll out system allowing it to fit into very small nursing home lifts in an upended position without the operator having to take the weight.

Specifications/ Dimensions:

Length: 193 cm
Loading Wheel Width: 58 cm
Max Width (Arm-sides Out): 89 cm
Height Mattress: 78 cm
(inc foot stop): 92cm
Min Height: 27 cm
Loading Wheel Height: 58.5 cm
Weight: 38 kg
Max Load: 318 kg (50 st)

Options:

Choice of cover/mattress colour & fixed wheel options.
Also available with multi directional wheels.

SKU: AUD13

Includes: Mattress, 3 Straps, 2 Soft Polyester Body Covers (1 Standard Size & 1 Extra Large)

The Multilevel Dual AT200

The Multilevel AT200 has been designed and manufactured to move easily over cobble stones, gravel, uneven surfaces, door thresholds, grass, snow and ice. Its large pneumatic tyres and tread pattern minimise surface vibration.

The stretcher can be moved between height positions without assuming the full weight. The multilevel facility allows for body transfers without lifting and when folded flat, it fits into the same space as a conventional trolley.

Specifications/ Dimensions:

Length: 193 cm
Width: 58 cm
Maximum Height: 83 cm
Minimum Height: 27 cm
Loading Wheel Height: 60 cm
Weight: 34 kg
Maximum Load Weight: 200 kg

Options:

Choice of cover/mattress colour. Also available with multi directional wheels.

SKU: AUD004

Includes: Mattress, 2 Straps, 1 Soft Polyester Cover (Standard Size)

The Multilevel ISP

The Multilevel ISP funeral trolley is a compact and lightweight unit that offers excellent maneuverability throughout the removal process. Its multi-height facility allows easy sideways body transfers. An interchangeable removable First Call Stretcher makes removals in space restrictive areas easier. The Multilevel ISP also benefits from our Roll in Roll out system allowing it to fit into very small nursing home lifts in an upended position without the operator having to take the weight.

Specifications/ Dimensions:

Length: 193 cm
Loading Wheel Width: 51.5 cm
Height – Mattress: 84 cm
Min Height: 27cm
Loading Wheel Height: 58.5 cm
Weight: 33 kg
Max Load: 200 kg (31 st)

Options:

Available with brakes, steering, cover/mattress colour & fixed wheel options. Also available with multi directional wheels.

SKU: AUD24

Includes: First Call Stretcher with foot-stop, 3 Straps & 1 Soft Polyester Body Cover (Standard Size).

Combination Stretcher

The Combination Stretcher gives the operator the choice of using the First Call One Man Loader with Folding Footend or First Call Stretcher with footstop individually or combining both to offer an advanced removal package.

Specifications/ Dimensions:

Length: 193cm
Loading Wheel Width: 59cm
Max Height including Footstop: 90.5cm
Min Height: 28cm
Weight: 41 kg
Max Load: 200 kg (31 st)

Options:

Available with brakes, steering, cover/mattress colour & fixed wheel options. Also available with multi directional wheels.

SKU: AUD388

Includes: First Call Stretcher with foot-stop, 3 Straps & 1 Soft Polyester Body Cover (Standard Size).

Equipment

Stretchers

The Compact Stretcher

The Compact Stretcher is the smallest folding first call stretcher in its class. Designed to be used when space is a premium, the Compact Stretcher is securely housed in a heavy duty padded Cordura Bag and is guaranteed to give a professional impression whether used at a care facility or private home.

Specifications/ Dimensions:

Length: 187 cm
Fold Length: 46 cm
Width: 51 cm
Height: 19 cm
Weight: 8 kg
Maximum Load Weight: 165 kg (26 st)

SKU: AUD14

Includes: 2 straps and standard cover.

The First Call Stretcher

A simple and effective folding foot-stop has been fitted to the First Call funeral stretcher. This will assist the operator when wheeling and transporting remains up or down stairs. The wheels and legs fold away and it also folds in half for neat storage.

Specifications/ Dimensions:

Length: 187 cm
Length Folded: 91 cm
Width: 51 cm
Height: 19 cm
Weight: 7.5 kg
Maximum Load Weight: 165 kg (26 st)

Options:

Available with multi directional wheels.

SKU: AUD11D (complete with folding foot stop)

SKU: AUD11C (without folding foot stop)

Includes: 2 straps (Fits in standard storage bag).

First Call Stretcher Storage Bag

A wipe clean PVC coated polyester bag with carrying handle and single zip for closure. Contains and protects first call stretchers when not in use and enhances professional image when used in public.

Colour Option:

Maroon & Black

SKU: AUD11

Stretchers

First Call Flexible Stretcher

The First Call Flexible Funeral Stretcher is constructed from hard wearing wipe clean PVC with built in wooden slats. The Flexible Stretcher is welded throughout and features six carry handles and three internal straps.

Specifications/ Dimensions:

Length: 196 cm

Weight: 8 kg

Max Load: 165 kg / (26 st)

3 internal straps and 6 carry handles

Options:

Cover colour and zip placement centre or perimeter

SKU: AUD387

Small Remains Carrier

The discreet and unobtrusive removal of infant remains is absolutely essential. The Small Remains Carrier offers the solution to this most sensitive of removals. Manufactured in a wipe clean vinyl, the carrier features short strap handles and a sturdy twin zip closure. The Carrier also has a removable internal pouch to aid in cleaning.

Specifications/ Dimensions:

Length: 61 cm

Width: 35.5 cm

Height: 30.4 cm

Colour Option:

Maroon & Black

SKU: AUD386

First Call Flexible Stretcher HD

The First Call Flexible Stretcher HD is a heavy duty flexible stretcher constructed from heavier PVC with thick wooden slats and is longer than the standard version. The five internal straps and large zip make containment easier.

Specifications/ Dimensions:

Length: 213 cm

Weight: 10 kg

Max Load: 230 kg (36 st)

5 internal straps included

Options:

Cover colour and zip placement centre or perimeter

SKU: AUD390

The Body Lifter

Designed to minimise unnecessary handling, this cleverly designed stretcher is fitted with snap locks at the head and foot ends which allow the stretcher to be separated into two halves. Simply place one half either side of the deceased and slide both halves together until the locks snap closed. The concave surface cradles the remains and prevents lateral movement.

Specifications/ Dimensions:

Length: 200 cm

Min Length: 167 cm

Width: 431 cm

Height: 9 cm

Weight: 9 kg

Max Load: 165 kg (26 st)

SKU: AUD15

(Includes Straps)

These durable stretcher covers will fit the entire range of removal stretchers offered by MazWell® and are designed and manufactured to be durable, hard wearing and easily cleaned. They are intended to enhance the removal of the deceased by providing a dignified covering of the body and upper part of the stretcher, reducing any distress caused to family members, nursing home staff and residents as well as members of the public. Available in different fabrics and colours, these covers withstand frequent cleaning and heavy use.

Standard Covers

This soft polyester stretcher cover is completely elasticated, light weight and machine washable.

Colour Option:

Black & Maroon

SKU: AUD325

Cordura Covers

The fabric cover is a high quality and fully elasticated. The fabric cover is water resistant and machine washable.

Colour Option:

Black, Maroon, Navy & Green

SKU: AUD321

Corduroy Covers

The Corduroy cover is the highest quality cover available. Lined with a tear and water resistant material.

Colour Option:

Black, Maroon & Navy

SKU: AUD320

Fixed Height Coffin Bier

This fixed height coffin bier provides a stable and easy to move platform for coffins to rest on either in the chapel of rest after preparation or in the workshop while preparation procedures are completed. This bier is fitted with brakes for extra security.

Specifications/ Dimensions:

Length: 91 cm
Width: 48 cm
Height: 62 cm
Weight: 12 kg
Max Load: 200 kg (31 st)
4 x Braking 5" or 6" castors

Fixed Height Coffin Bier 6" Castors

SKU: AUD010

Fixed Height Coffin Bier 5" Castors

SKU: AUD016

Velveteen Bier Cover

The Velvet Bier Cover is a high quality cotton velvet cover. By adding the cover it quickly becomes a stylish viewing bier for use in the chapel.

Specifications/ Dimensions:

High quality cotton velvet covers to fit our bier.

Length: 274 cm
Width: 121cm

Colour Options:

Purple, Maroon, Black, Navy & Green

SKU: AUD012

Hydraulic Body Hoist

This hoist allows for safe and easy transfer of the deceased body from embalming table, fridge tray or removal stretcher to coffin or casket. Designed for ease of operation this unit can be operated by one person and eliminated manual handling in the embalming room or mortuary.

Capable of lifting 200 kg / 32 stone. The adjustable straps fitted to the cradle enable the Operator to manually adjust the position of the Body. This ensures movement from Tray to Coffin is conducted in a dignified manner whilst minimising the risk of a lifting injury.

Specifications/Dimensions:

Length: 1232 mm
Depth: 812 mm
Min height: 1307 mm
Max height: 1565 mm
Weight: 80 kg
Safe weight load: 200 kg

Specifications/Dimensions:

Length: 1232 mm
Depth: 812 mm
Min height: 1307 mm
Max height: 1565 mm
Weight: 80 kg
Safe weight load: 200 kg

SKU: TWI007

Universal Hydraulic Loader

Designed to unload coffins or trays from vehicles, the trolley can be raised or lowered by a powered electronic actuator, the coffin can be then lowered onto the fixed stops for safe transportation.

Performance Highlights:

- 24 volt actuator with integral charger
- Push button control switch
- Manufactured in 1.5" square tube
- 8" Braked castors
- Rubber rollers 2" diameter grooved 14" centres
- Integral folding handle for moving
- CE Safety Certified
- S.W.L. 320kgs (50 stone)

Optional extras:

- Retainer for first call stretcher
- Spare batteries
- Wall charger

Specifications/Dimensions:

Length: 1000 mm
Width: 665 mm (590 mm without side handles)
Closed height: 605 mm
Fully extended: 1275 mm
Weight: 77 kg

SKU: TWI063

Cleaning Equipment

Mopping Systems

25 Litre Buffalo Bucket & Wringer

Made from hardwearing polypropylene with dirt retaining sump and unique curved shape to avoid spillage. Sturdy, effective handle-operated wringer. Available in 4 colours - blue, red, green and yellow.

SKU: 761201	Blue
SKU: 761202	Yellow
SKU: 761203	Red
SKU: 761204	Green

Hygiene Handle & Plastic Kentucky Fitting

A lightweight aluminium handle with plastic fitting suitable for use with Kentucky mop heads. Available in four colours, plus white.

SKU: 761221	Blue
SKU: 761222	Yellow
SKU: 761223	White
SKU: 761224	Green
SKU: 761226	Red

Twine Scratchback Stayflat Kentucky Mop Head

450 g looped twine kentucky mops with an abrasive scratchback centre band for removing dirt whilst mopping. The stayflat band keeps the yarn flat on the floor, enabling the mop to cover a larger floor area, whilst the looped end yarn reduces linting and avoids the yarn tangling in use. Supplied colour - natural.

SKU: 761228

Caution Wet Floor/Cleaning In Progress Sign

A great value double sided A frame sign to warn against potential hazards from wet floor surfaces during and after cleaning or spillages. Made from vivid yellow plastic with bright red/black graphics.

SKU: 761371

Cleaning Equipment

Prochem Chemicals

Multi Pro

- Professional general purpose pre-spotter and traffic lane pre-spray for carpets.
- Excellent for draught marks and greasy areas.
- Apply by sprayer to all heavily soiled areas before machine cleaning.
- Turquoise blue liquid with citrus mint fragrance.

SKU: 922200
Size: 5 litre

Trafficlean

- A industrial strength high concentrate formula with extra water soluble solvents for grease removal.
- Pre-test for colour fastness and apply to all heavily soiled and greasy areas of carpet prior to extraction cleaning.
- Turquoise green liquid with mint fragrance.

SKU: 922201
Size: 5 litre

Extraclean

- Advanced micro-encapsulation extraction cleaner for carpets, rugs and upholstery.
- Anti-resoiling formula with odour neutraliser.
- WoolSafe approved maintenance product for wool carpets and rugs.
- Yellow green liquid with lemon breeze fragrance.

SKU: 922202
Size: 5 litre

Fresh Breeze Odour Neutraliser

- New technology odour neutraliser concentrate for carpets, fabrics and professional restoration cleaning.
- Can be diluted with water and applied by sprayer or added to cleaning solutions.
- Micro-encapsulation formula with odour absorber.
- Clear blue tinted liquid with fresh fragrance.

SKU: 922203
Size: 5 litre

Prespray Gold

- A high concentrate professional strength pre-spray cleaner for wool, wool-mix, stain resistant nylon and other pH sensitive, wet-cleanable carpets, rugs and upholstery fabrics.
- WoolSafe approved maintenance product for wool carpets and rugs.
- Amber liquid with floral lemon fragrance.

SKU: 922204
Size: 5 litre

Fibre & Fabric Rinse

- A professional acidic rinse agent or post spray for neutralising alkaline pre-sprays, stabilising colours and preventing browning.
- WoolSafe approved maintenance product for wool carpets and rugs.
- Prevents most colour bleed, yellowing and browning.
- Orange liquid with fresh orange peel fragrance.

SKU: 922205
Size: 5 litre

Contract Carpet Defoamer

- An economical anti-foam agent for carpet extraction machine recovery tanks.
- Off-white liquid with mild odour.

SKU: 922206
Size: 5 litre

Citrus Gel

- A citrus solvent and detergent based liquid gel spot remover for oil, grease, tar, gum and other oily spots on carpet and fabrics.
- Can be used safely on many spots and stains and is formulated to work on the fibre surface avoiding problems to latex and bitumen backings which commonly occur with other citrus based solvents.

SKU: 922207
Size: 1 litre

Solvex

- A water-rinseable, non-volatile blend of penetrating solvents and detergents for gloss and emulsion paints, nail polish, varnish and solvent soluble inks on carpets, fabrics and other surfaces.
- Clear solvent with aromatic odour.

SKU: 922208
Size: 1 litre

Fluid Dilution Chart

All measurements are shown in millilitres and have been rounded up to the nearest tenth. This guide is intended to help embalmers in selecting fluid strength, but is no substitute for embalmers experience and knowledge.

This table is designed to be used as a guide for how much neat fluid to use to create a diluted fluid of the desired strength. This is only a guideline and each embalmer must use their own discretion when deciding what fluid to use and what strength. This chart is designed to help when preparing fluids for injection. Because Dodge supply injection equipment with capacities of 5, 10 and 12 litres, we have provided approximate amounts for each tank size.

Arterial Fluid	Tank Size (litre)	1%	2%	3%	4%	5%	6%	7%	8%	9%	10%
